**TYPES OF
THE DEVINNE PRESS**

TYPES

OF

THE DE VINNE PRESS

SPECIMENS
FOR THE USE OF COMPOSITORS
PROOFREADERS AND
PUBLISHERS

395 LAFAYETTE STREET, NEW YORK
1907

Copyright, 1907, by
THEODORE L. DE VINNE & Co.

PREFACE

THE DE VINNE PRESS as it now exists is the outgrowth of a small printing-house established about 1836 on the second floor of an old building at the corner of Pine Street and Broadway. Since then it has had, as might have been expected, many changes of owners, foremen, workmen, types, and machinery, but it has every year shown steady increase in its service to the printing public.

These specimens show that its present collection of printing types, some in large but others in limited quantities, which have been diligently gathered from leading foundries of this country and Europe to please the tastes of many customers, has received and is receiving a generous appreciation. Some of its styles have been made for the exclusive use of this house and are not now to be had from any type foundry or other printing-house.

PREFACE

Its large and varied collection of Roman text types shows approved new and old styles in full series upon more than two hundred bodies. Novelties of real merit are constantly added and are usually in large fonts. The newer faces have been cast on the American system of point bodies. Old-fashioned styles of merit that are no longer made, but that still find favor with discerning customers of the house, are on the old irregular bodies.

For the service of those who require large amounts of composition in haste or in unlimited quantities, composing machines of recent construction have been provided. For the gracing of book and pamphlet pages, head-bands, initial letters, borders and tail-pieces are in abundant supply. Many of these decorations have been specially made by artists of eminence, in varied designs for each chapter but harmonious in general effect; others are faithful copies of designs produced by masters of printing in the fifteenth and sixteenth centuries.

The electrotype foundry, press rooms, and book-binding are equipped with the best machinery and expert workmen.

THE TYPES OF
THE DE VINNE PRESS
FOR THE USE OF COMPOSITORS
AND PROOF-READERS

STANDARD

His Style
of Black-letter
resembles that used
by Johann Gutenberg for his
Bible of Forty-two Lines.
William Caxton, who began as a
printer with types now known as
Old Flemish, afterward made use
of this earlier form, as then cut and
cast by the type-founders of France.
As this form has been used in England
for more than three hundred years for
the Official Copies of all Acts of Parlia-
ment, for the Book of Common Prayer,
and Ecclesiastical Forms, it has fairly
earned the name of OLD ENGLISH.
Bookish men agree in rating this as the
Standard form of Black-letter.

The Black-letters of the DeVinne Press

THE faces of Standard Black here shown are not strictly uniform, for they were devised and cast at different times. The English type-founders from whom they were bought certify that they are castings from matrices of the fifteenth and sixteenth centuries, or are faithful reproductions of the original designs.

This cut of Standard Black-letter (here known as Pica No. 4, K. S.) was used for printing the Groslier Club edition of the "Philobiblon" of Richard de Bury, as translated by Professor A. West of Princeton University. The font has many peculiar ligatures and abbreviations, with some odd accents rarely provided for any other font of Black. This Philobiblon type and the Helyas type on page 7 are preferred by bookish men for the reprinting of Old English books of the fifteenth century. Newer designs of faultless form are put aside. Although the letters are closely fitted, print therefrom is easily readable.

THE PHILOBIBLON BLACK

In all the Early Forms of Old English Black-letter type, the lower-case *i* always carries a slanting stroke over the top, not unlike the acute accent used over vowels in reprints of foreign languages. Designs of a later period have a dot like the period or the full point over this *i*. The spurs at the ends of some angles, usually short, are omitted in every letter where the spur would interfere with or confuse the clearness of an adjoining letter. A so-called hair-line of perceptible thickness is put in the center of open capitals to close up unpleasant gaps of white space. Some of these capitals may seem ungainly to a reader whose taste has been formed on modern designs, but the shapes of letters afterward produced to make the letters conform more to the old roman model are not improvements. The older forms have more of clearness and are more impressive and memorable.

ON BREVIER BODY

OF the smaller sizes of Black-letter that can be used as acceptable mates of this Standard Black we have in case fonts on Nonpareil, Brevier, and Long-primer bodies. (See pages 197 and 206 of the Office Specimen Book.) These smaller bodies are needed when an order is given to set a card or circular in Black-letter exclusively. They may be required also for side- and foot-notes for Black-letter texts. As print from these small bodies is somewhat indistinct, and is especially objectionable when arabic figures have to be used in the notes, it is advised that roman lower-case be preferred when the compositor has liberty of choice.

THICK-FACED

Some Judges
of **T**ypography
rate this **T**hick-faced as
the **O**rthodox **F**orm of **B**lack-letter,
but it is not so regarded by students
of **O**ld **B**ooks. It was first made by
Robert **T**horne of **L**ondon, about
one hundred years ago, and then met
with favor, but now is not so highly
esteemed. The series here shown is
Not **U**niform, for it has been copied
and changed by many founders. The
thicker form is of use for a heading or
bold line in job work, and for an em-
phatic word in a **B**lack-letter **T**ext
of a thinner face. Its capitals can be
used as **I**nitial **L**etters to some other
forms of **B**lack. The **F**ive-line and
Four-line have no lower-case sorts.

The thick face of the types in this Paragraph is of service for Headings and for Display lines. Too gloomy for most Jobs; of small use in Ordinary Book work.

EVEN spacing of words and neat justification of lines, often made difficult by long or indivisible words in the copy, can be aided by the occasional use of Monk or Missal initial letters (see pages 337, 338 of the Office Specimen Book) either as initial letters or as entire words. A Missal initial so selected should have its stem or thick stroke as thick as that of its adjoining Black-letter. Capitals of Black-letter are never acceptable when used in a mass for each letter of a word. Over-wide spacing of words in lines, or the spacing of single letters in a word, can be prevented by the substitution of a smaller size of the same style for an unimportant and of a larger size for an important word.

 Critical reader may note Two distinct Fashions of Black-letter on these pages—one very fat and thick, and one not at all thick. Of the very Thick Face we have the sizes Double Great-primer and Double Small-pica; of the relatively thinner face, Pica, Small-pica, and Brevier. There are also in case some intermediate sizes and fashions of Black not belonging to either series that may be used in combination with this Thick-faced style.

OLD BLACK

Old Black is the simpler form of Black=letter preferred by Early Scribes for Manuals of Devotion and School=books. It was largely employed by Spanish Printers of the fifteenth century, and should be preferred now for old Spanish subject matter. It is also known as Tudor Black, but it was seldom used by the early printers of England. Its capitals do not mate neatly with all pointed Black=letter. Although fat, or of a greater width, its appearance is not improved by letter=spacing.

The Black-letters of the De Vinne Press

OLD BLACK

Ten sizes of this Old Black, rightly graded from Nonpareil to Forty-eight point, are in case, and some of the fonts are in good supply. The larger sizes are preferred; 6-point is seldom required.

THIS HELYAS TYPE is a faithful reproduction of the type used by Wynkin de Worde in his edition of Helyas or Knight of the Swanne, dated London, 1513. Reprinted from the unique copy of Mr. Robert Hoe, by the Grolier Club of the City of New York. It was cast in the type-foundry of Sir Charles Reed's Sons of London, who are the owners of the surviving punches and matrices of the Star-Chamber founders and their predecessors. This face and that of the Phlobiblon letter are preferred by all book-lovers for the reprinting of Old English texts, in books of compact or convenient form.

THE HELYAS TYPE

A large and open initial **O** has been selected for page 6, because its decoration agrees well with the open spaces within the letters of the text type, and with the wider spaces between the lines. A dense and closely engraved initial **O** would not be in harmony with the type.

Old Black is not a favorite for commercial and miscellaneous job work. It may be selected with confidence for article headings and for displayed lines in literary circulars or pamphlets, but not for ordinary mercantile advertisements. Its lower-case is round, clear, and quite as readable as the Satanick. It may also be selected for the title-pages of pamphlets on bookish subjects, and for letter-headings that call for the use of many sizes of this face. Its greater breadth and clearness may tempt the compositor to use it for one short line in a title-page, but this selection is seldom pleasing. Old Black is at its best when composed in a mass.

OLD FLEMISH

This is the face used by Caxton for his earliest books, but afterward he neglected it for a French form of the Standard Black-letter shown upon a previous page. Old Flemish has been incorrectly called Caxton, Old Text, and Old German. It is a useful letter for Flemish, Hollandish, and Knickerbocker Dutch documents and reprints, or for books concerning Flemish subject matter. It is liked as an acceptable letter for Quaint Running Titles in other Books and Pamphlets. Selected with discretion, its capitals are serviceable as large initials when they fit neatly in the text, without showing gaps of white space above or below the line.

OLD FLEMISH

Eight sizes of the Old Flemish, graded from Nonpareil to Four-line Pica (body 48, by German standard), are in case. All fonts are complete with figures, and the larger sizes have the German umlaut.

Composition in all Black-letter, neatly spaced and without false divisions, and in a narrow measure, is usually a work of some difficulty. Capitals only cannot be used for entire words: there are no small capitals: indivisible words or syllables are common. Thin spacing of single letters, to make a line too short fill the measure, is not approved by the critical, yet it is possible in some jobs to substitute smaller faces of the same series for trivial words and larger faces for the words of more importance, as has been previously suggested. Monk and Missal types may be good substitutes for the disallowed capitals. Some license of inconsistency in the free use of Capital Letters should be permissible to prevent unsightly spacing, which is a much greater fault.

Words as arranged in copy must not be changed without special permit from the writer. Yet these words are often arranged so that they must produce uneven spacing or false divisions. When the compositor meets with these obstacles, and when overrunning composed lines above or below does not correct the faults, he need not try to amend when the writer will see his first proof. In most cases, the author can substitute in that proof longer or shorter words that will close the gap decently. In narrow measures tasteful composition in Black-letter is impracticable without this assistance from the writer, and the replacing of objectionable words by others that will exactly fill the prescribed space cannot be done in a hurry. Nor is the change desired always satisfactory after long deliberation. Few persons can foresee the result in proof. The words chosen may be too long or short, and prove as obstinate as the types.

On this point Drew, in his *Pens and Types*, wisely says: "Theories are elastic, — are expansible and compressible, but types of metal have set dimension of extension, and, in some circumstances, absolutely refuse to budge, — wherefore theories must gracefully yield, and allow, if may be, a two-letter division even in a wide measure. Types are tyrannical, and will sometimes perpetuate solecisms under the plea of necessity."

This style of type was called by early French founders the *Grosse Batarde*, and William Blades describes it as "dashing, picturesque, and elaborate."

Many Capital Letters of Old Flemish are exceedingly uncouth, but they are seldom objected to in running titles, and may be selected occasionally for Initial Letters.

SATANICK

IS called
so by the

American type-founders. It
is the American copy of the

TROY TYPE

designed by William Morris
of the Kelmscott Press. He
made this style for 18- and 12-point
bodies only, but American founders
now provide it on thirteen bodies: 6- 8-
10- 12- 18- 24- 30- 36- 42- 48- 54- 60-
and 72-point. It is a crude amalga-
mation of Roman with Black-letter,
which is said to have been modelled by
Morris upon the style made by Mentel
of Strasburg in or near the year 1470.

SATANICK

This Style of Type

was designed for the reprinting of medieval books or subject matter, but it has been and is now freely used for modern books, and even for mercantile advertisements and circulars. Its lower-case letters are fairly readable, but some of its capitals are extremely uncouth and cannot be made pleasing in any combinations. Lines of capitals that contain the characters **f J L T W** and **V** are usually rejected in the proof.

William Morris was the first to perceive that typography was strong enough to stand on its own feet without crutches from rival arts. He saw that there was merit in bold print, and possibilities of development in the crudity of Old Books and even of Chap-books. Not content with his first experiment in strengthening the Roman character, he undertook this new departure from the old Gothic model, and the Troy type was the outcome.

Designers of the Printing Types of the nineteenth century modelled many of their new forms on those of lithographers and copper-plate printers, and vainly tried to reproduce all their refinements. The hair-line of every letter approached invisibility, and its form was ornamented with shadings and obscured with flourishes. These imitations showed care and skill, but the general effect of types so made was that of feebleness. **Æ** Letter-press Printing steadily degenerated until it became a mean copy, often a travesty on engraved work. The literary world had to wait for Morris to revive a really Virile Typography.

Troy Type met the fate

of other innovations. Admirers of the then prevailing taste for feminine delicacy in printing derided it as an affectation of Medievalism. Lovers of old books hailed it as the revival of old-fashioned Virile Typography. On one feature all were agreed. Books in Troy type were well made. Never before had there been better editions than those of the Kelmscott Press, as shown in the Chaucer, the Golden Legend, and the Histories of Troye. Slow of sale at first, the books in the new style soon attained an unprecedented appreciation. Many were out of print soon after publication, and have been sold at auction at four and five times the price first asked by the publisher. They are still in request and command extravagant sums, due not to the beauty of the type but to the care given by Morris to the minutest details of workmanship. The presswork of the books is faultless, but it cannot be reproduced worthily on dry and cheap paper and by hasty methods.

SLOPING BLACK

This Inclined Style of Black-letter is not often required, but it may be used very effectively in Law Blanks for any displayed phrase or word like

Indenture

or in a Composition largely or exclusively set in Italic or Inclined Script, or in open display for which this style has been selected. It is not recommended for single lines of display in any composition of upright letters. Like other forms of Black-letter, it shows to best advantage when it is massed in a paragraph.

The Black-letters of the De Vinne Press

ANGLO-SAXON

This Black-letter

OF MODERN CUT IS

Approved

FOR DISPLAY LINES IN

Magazines.

AUGUSTAN BLACK

Is the Name given to a Light-faced
Black-letter of similar Fashion
and of Neat Form, of which we
now have Four useful Sizes,
Great-primer, Pica, Long-
primer, and Brevier. All
of the other sizes have
been discarded.

CHURCH TEXT

So called because it was largely used during the Middle Ages for the lettering of

Tombs and Tablets

in Churches. Its condensed and very obscure Lower-case letters, that are satisfactory now to but few Churchmen, should be used with extreme caution. The large

C on this Page is one of a Series of Initials that mates well with this Style. These Smaller Decorated Initials

C **A** **R** **C** **A** **D** **E** **F** **D**

are not so pleasing, but they can be used with advantage as Two-line Letters for Black-letters of a Lighter Face.

CHAPEL TEXT

CHAPEL TEXT

Differs from Church Text mainly in its Capitals. Its Lower-case is slender, spiky, and rather obscure.

THE CAPITAL

Letters are of greatest service as Two-line Letters for Texts in Roman or Black-letter.

ON THIS SERIES

we have four sizes complete with lower-case, and a fifth, largest of all, of capitals only. The smaller sizes can be used for programmes, invitations, and ceremonial printing.

NEVER SELECT CHAPEL TEXT

for Advertisements or for Headings in ordinary Book or Pamphlet Work, that should be instantly readable.

ALL FONTS HAVE ARABIC FIGURES

1 2 3 4 5 6 7 8 9 0, of relatively large size, which may be good mates for other Black-letter Fonts not provided with figures.

MISCELLANEOUS

BLACK-letter of very small size is unavoidably indistinct in print, but sticklers for perfect uniformity may insist on its use for extracts or for foot- or side-notes to a text type of the same face on larger body. It is also in occasional request for personal cards, ceremonial invitations, and small note headings. This face on Nonpareil body is No. 400, from the Bruce Type-foundry. Its lower-case alphabet measures 6½ pica ems.

FOR THE composition of small cards and circulars for which the great blackness of the Thick-faced style or the uncountness of older forms may be unacceptable, the smaller sizes of Black-letter now made by modern designers may be satisfactory substitutes. This face of Augustan Black on the Old Brevier body (8-point) is an acceptable cut of an approved modern style. The lower-case alphabet measures 6¾ pica ems.

OBJECTIONS made by many Critics to the Spurs and Bristles at the Angles of some Forms of Black-letter led to the Designing of this Style. It was once esteemed, but is now neglected.

OF THE STYLE shown in these central panels we have only the two sizes of Great-primer and Double Small-pica, from the Bruce Type-foundry.

MANNERISMS made in an attempted reconstruction of the form of Black-letter often lead to unexpected effects. The change that seems satisfactory on 18-point may be a disfigurement on 8- or 24-point. Exact reduction or enlargement from an Inflexible Model is usually disappointing. To produce the same effect, the smaller body must be relatively wider and the larger body more compressed. In every series on many bodies, one body always seems more symmetrical than any other. This is Borussiaan on Brevier body.

THIS BORUSSIAN on a Small-pica body is the result of an attempt to unite the angular features of Black-letter with some measure of the freedom of set Script. It is very condensed, and not distinct on small bodies; but the larger sizes, made in two forms, of a thin and a thick face, are graceful and readable.

BLACK ORNAMENTED

This lavishly ornamented type, made about sixty years ago, is provided with a lower-case on five-line pica body that has to be justified to profusely decorated capitals on nine-line body. A curious exhibit of the extravagant love for typographic frippery that prevailed about and for some time after the middle of the last century. Do not select this style for a display line without special order. To some buyers of printing the capitals have attractiveness as initials; to a larger number of readers the style is hopelessly out of fashion. See other remarks about decorated Black-letter on pages 18 and 20 of this pamphlet.

Black-letter in outline is the copy of a design by Christopher Van Dijk, that was admired and reprinted by Moxon in his *Mechanick Exercises* of 1683. It was made in type for the special use of the De Vinne Press, as a letter of display. To Diplomas and Certificates this Moxon Black imparts a quaintness desired by many customers that cannot be given to these documents by the Black-letters of modern design. It proves most satisfactory when used as the shading outline in black ink for a specially engraved central letter printed in red or gold. See proofs of the central letters in the Office Specimen Book, page 364.

A more generally useful style of Black-letter capital is the Outline Uncial capital now shown on an advanced page of this work.

The Black-letters of the De Vinne Press

TYPES NOT IN CASE

The angularity and intricacy of many characters of Black-letter have been constant temptations to the making of other variations that once were admired by customers of this house for whom they were specially purchased. Some of these variations had a temporary popularity, but most of them have fallen into deserved disuse.

In addition to the fonts here exhibited we have other styles rarely called for but not deserving of the room they occupy in case. Of occasional service and in too good condition to be thrown away, they are packed in paper and reserved for the few customers who insist on the re-use of types of the fashions of the last century. These paper-packed varieties should be selected only by special request.

GERMAN TEXT No. 580, so named in our Office Specimen Book, with its profusely decorated initial letters and its petty and indistinct lower-case, in a series of five sizes, has been thrown away, as unfit for modern practical work. It will not be renewed. See Office Specimen Book, pages 223-4.

SAXON, almost as profusely ornamented in its capitals, and with detached flourishes intended to make, but that seldom do make, exact connection with the letter, has met a similar fate. These styles are mentioned only to show that the profuse ornamentation and delicacy attempted by the designer, once esteemed of great beauty, have defeated his purpose and have really made the style valueless to modern buyers of printing. O. S. B., pp. 224-5.

BLACK ORNAMENTED, even when the letters are reasonably distinct, is not improved but damaged by its excess of ornament. Some of the larger sizes are of limited service as initial letters, but the lower-case sorts are generally disliked. O. S. B., pages 232-3.

ANGLO BLACK, an attempt to simplify the standard Black-letter form by the rejection of hair-lines and spurs to angles, is not an improvement, but a degradation of the character. Simplicity when it is carried too far becomes a positive coarseness. O. S. B., page 240.

FLORENTINE BLACK, in two sizes, with capital and lower-case on different bodies, is also in paper. Select only when requested. O. S. B., pages 235-6.

The Black-letters of the DeVinne Press

ITALIAN TEXT, an absurd style, of a needlessly intricate construction, is seldom called for now. See Office Specimen Book, page 238.

MEDIEVAL TEXT, CARD TEXT, and FANCY TEXT, styles once in frequent request, have been destroyed and will not be renewed. O. S. B., pages 218-22.

A study of these fanciful styles, coupled with our present knowledge of their entire inapplicability to any modern work, should teach every compositor that alphabetical letters are not approved as subjects for profuse ornament, and that ornament does not make a printed line attractive, but may make it bewildering and unacceptable. The conclusion so reached may be extended and applied with equal force to the present fashion of inserting ornaments in composition where ornament is not really needed. When ornament does not help, it does hinder.

Yet the caprices of fashion have not always been wise, for they have authorized a rejection of the following serviceable styles.

AUGUSTAN BLACK and CONDENSED BLACK are really useful forms that may be restored to their old popularity when they have been shorn of their needless ornamental pendants. The flourishes at the tail of the capitals, once thought crowning graces by the designer, seem to have been the pretext for their entire neglect. The disciplined buyer of printing may tolerate eccentricity in form, but he does not tolerate ornament that even partially obscures or confuses the plain intent of the letter. O. S. B., pages 207-9.

It should be noted that the variations from the old standards of Black-letter that are now in most favor tend toward greater simplicity, or to some tolerable eccentricity in the direction of flourish or decoration.

TEUTONIC OUTLINE, once approved as a decorative letter even in mercantile forms, is now out of fashion. O. S. B., pages 216, 238.

COMPOSITE is another attempt at simplification. For many years this style was preferred as the best letter for display in the script of legal documents. Why it should have been preferred to the neater cut of Borussian is an anomaly that cannot be explained. O. S. B., page 239.

The Black-letters of the De Vinne Press

MEDIEVAL, so-called, is an old attempt to make a pleasing letter without the aid of hair-lines or light strokes of any kind. It is another undervalued style. It should be called Byzantine, for it was largely used by scribes of the Eastern Empire, and its density and simplicity seem to have inspired the designer of the type for Gutenberg's Bible of Forty-two Lines. To those who love eccentricity the capitals are useful as initials. See Office Specimen Book, pages 217-8.

BLACK OPEN and TITLE TEXT OPEN are other forms of Ornamented Black that have had their day of service and are no longer desired. O. S. B., pages 212-5. OUTLINE BLACKS are not favored by this house; they are frail and soon lose their sharpness and beauty when printed by cylindrical impression upon hard and dry paper. These outlines and other styles of cross-lined and shaded Black-letter make a creditable showing only when perfectly new. Few printers care to renew them after their too brief service. Outline and ornamented Blacks, of doubtful value even in ceremonial printing, should never be selected for mercantile work.

Unless specially requested, do not space single letters in lines or words of Black. The spirit of old Black-letter calls for a close fitting of all characters, as well as for great compactness in composition. Black-letter shows to best advantage when WORDS, not letters, are thin-spaced.

Avoid the composition of a title-page or a circular exclusively in Black-letter by the method of open display. The lower-case catch-lines of small Black that may be required between lines of bold display damage the general effect. If catch-lines have to be used let them be in small roman capitals.

Black-letter is most effective when set compactly, either as a paragraph with large initial letter or in half-diamond indention.

Initials of large sizes that span three or more lines at the beginning of a compact composition should be of approved old-style form. Kelmseott initials, the Caxton initials, and others of similar quaintness are best. Initials of modern design are inappropriate and ineffective before the old faces of Black-letter.

ALHAMBRA BLACK is of simpler and neater design and has a readable lower-case, but its profusely ornamented capitals render it distasteful to readers of the present time. O. S. B., page 234.

The Black-letters of the DeVinne Press

THIN-SPACING of single letters may be prevented sometimes by the use of a large square initial letter at the beginning of the paragraph, but the initial so chosen should line with the first line of text letter and make no noticeable gap of white.

Sometimes the large initial narrows the measure and makes difficult even spacing and neat justification. To prevent these faults, a larger size of Black-letter may be selected for the more important and a smaller size for the less important words. The capital letters of the Monk and Missal series can also be used for this purpose. Extra justification will be required by these irregularities, but the improvement so produced in the appearance of the composition is worth the additional trouble. *The uncouthness and unworkmanlike show of the thin-spaced letters of a word within a solid text should be prevented at any cost.*

The combination, justification, and even-lining of different sizes in a solid text call for skill and patience, but these troublesome expedients are to be preferred to slipshod letter-spacing, which is as unworkmanlike as the uneven leading of a book page for the purpose of making that page of standard length.

CAPITAL letters of a lower-case font with lower shoulders make trouble. When a letter of this form is needed, send it to the foundry, and have its objectionable shoulder cut off. The value of an initial is largely in its close fitting to the text type, and especially so in a Black-letter text. The initial that compels a broad gap of white below is not a grace; it is a positive disfigurement to any composition.

Uniformity of style, commendable in many forms of open display, is not possible in all compositions of Black-letter.

IN A TITLE-PAGE, the standard style of Black-letter may be selected for the name of the book as the main line of display, when there is reason to believe that it will be acceptable to the author and publisher. It is usually acceptable when the book treats of liturgical, bibliographical, or Old English subject matter, but it is not so wise a choice for a book entirely modern in matter and manner. The thinness and boldness of Black-letter often tempt the compositor to select it for the main line of display when that line has too many letters for proper prominence in roman capitals. Black-letter will give the boldness that is not possible from the use of thin-stemmed Two-line Condensed capitals, but it makes discord with the roman capitals of a title-page.

Initials

Initial Letters

OUR collection of initial letters is large and varied. Those made expressly for the general service of this house have all the letters of the alphabet. Some have added blocks for two or more colors, and some are single letters only. Other complete alphabets from several European foundries are on foreign bodies that differ from our American standard. They have been collected to give proper expression to fashions of book work in different countries and centuries, and should not be used indiscriminately. The letter that is a grace in one book may be a blemish in another. The suggestions that follow will serve as guides to selection.

INITIAL LETTERS are great helps in making print attractive. Readers who prefer a severe simplicity in print and who dislike words or lines in types of bold display, or a too frequent recurrence of descriptive subheadings, seldom object to a properly selected large letter at the head of a long paragraph. They are really needed to make easy of reference the short chapters of the

The Initials of the De Vinne Press

Bible and the different divisions in hymn-books and manuals of devotion. In many other kinds of printed matter they could be selected oftener with advantage. A proper initial at the beginning of a first paragraph always gives attractiveness to the composition. It is the feature that first catches the eye. The letter selected for this service may be plain or ornamented, but it should be fitting in size and style and appropriate to the subject.

A large or ornamented letter at the beginning of a chapter or paragraph, as high as many lines of the text type by its side, and lining neatly with its first and last lines, is known as an Initial.

The roman capital letter of large size and in a similar position is called a Two-line letter. "Two-line" is not precisely descriptive, for a type so called may span three or more lines of its mated text, but it is not a two-line letter if it does not line. The capitals furnished with large lower-case letters, sometimes used as substitutes, do not fairly serve as initials, for they have shoulders at foot that leave an unpleasing gap of white space at the last line. To prevent this fault, type-founders provide for initials special types with small shoulders so that they will truly line with text type.

SIZE is the feature to be first considered. For small type on a small page of the ordinary book, select a plain two-line roman letter that will span two lines of the text; for large type on a large page, a letter that spans six or more lines may produce a more pleasing effect. A small initial on a large page makes the entire composition seem petty. Yet there are limits to the use of plain two-line letters, which are not so acceptable, even for large text type, when larger than four- or six-line pica. The size of an initial should be controlled by the size of the type. A letter of the height of two lines of text type should be enough for the double-column matter of an 8vo or 12mo page. When the text type is very small, as of 8- or 6-point, a three-line initial may be better. If the text type of an 8vo is in 12- 14- or 18-point, an initial spanning three or four lines will not be too large, and may be still larger with propriety.

The two-line should agree with the text in style as well as in line; a page in Caslon or in Elzevir is more pleasing when it has an initial of similar characteristics. Two-line letters of Caslon, Modernized Old-style, Ancient Roman, or MacFarland, Cheltenham, etc., are consequently required.

The Initials of the De Vinne Press

TWO-LINE LETTERS call for another requirement. For text types in 10-point or smaller size the ordinary width of roman capital is satisfactory, but for a text in 18- or 24-point, the two-line initial is more pleasing when compressed. For very narrow measures of small text types, the two-line letter is of better shape when it is decidedly condensed.

For large two-line letters of roman capitals a face moderately condensed is to be preferred. Letters like A J L T Y, with structural lines that do not entirely fill the body, make awkward gaps of white space that are disfigurements to the general effect. It was the perception of this disfigurement that induced the early book-makers to fill this vacant space in the letters of irregular form with tracery or decoration.

A two-line letter of this **A** is to be preferred to the broader form **A** that makes a more unsightly gap of thinner form **A** blank space on each side.

The broader form of letter is also objectionable when it has stems much thicker than the type of the text about it. Never select any expanded form of letter for an initial when it makes harsh contrast with the shape of the small types of the text. For the same reason avoid using extra condensed two-line letters.

One initial of large size is enough for a page. There is, at times, a need for smaller initials on that page, but those that are added should be much smaller. Two or more initials on the same page of the same size confuse the reader and nullify one another. They may be acceptable on a pamphlet cover page, where they are relieved by abundant surrounding blank space, but they are not pleasing on the page that is full of small type.

When one large initial only is used, that initial should be very large, and it is most effectively placed at or near the head of the page. A small decorated initial that spans but two or three lines of text type on a large page and is filled with closely engraved lines may not be so attractive as the plainer two-line roman capital.

STYLE is of importance. As a rule, the plain roman two-line initial is preferred for books or circulars of serious subject matter, but there are some exceptions, not easily described or classified, for which the decorated initial may be an improvement. The small ornamented initial is best fitted for small type, but it can be used sometimes as a secondary attraction in the para-

The Initials of the De Vinne Press

graphs that follow a first large initial. When two or more are to appear on the same page the first should be very bold. Under no circumstances should the first be small in size and niggled with dense or closely engraved ornamentation. The small ornamented initial instead of improving really degrades the composition. On a page of large type one small initial always seems out of place.

In the early days of printing when paragraphs were not made, and when a chapter of many pages had no break of white space from its beginning to its end, the first letter of the new chapter always began with a big and ornamented letter.

To prevent an excess of the paragraph signs ¶ ¶, initials of very small size were occasionally used by early book-makers in very compact composition to divide the subject matter of separate sentences, or to distinguish versicles from responses.

Initial letters made before the invention of printing were designed for two or more colors. When color printing was found impracticable, the outline only of the letter was engraved, in the belief that the future owner of the book would fill in the outline with any bright color. The desired color was seldom added, but designers have followed the old fashion of preferring initials engraved to show white letters. Lines or vines that fill the gaps of white around the more irregular parts of the letters are added to make a light-and-shade contrast of black, white, and gray. The initials now most approved by publishers are those that have letters that appear as black, with light and open decoration about them that seems gray in print.

An engraved initial in which the letter has been made obscure by eccentricity of shape and by a profuse tangle of surrounding intertwined lines or vines is seldom pleasing; it is spoiled by what artists call niggling or overworked decoration. Decoration about an outline initial should be open, and should mate with the gray color of adjoining lines of text type.

THE NUMISMATIC on 8-point body, first made in type for the lettering of old seals and medals, is a small size now used for the petty initials of some books, but it cannot be used effectively for this purpose within the limited space of an 8-point body. It has not enough of blackness and boldness to give distinction to new subject matter, and the types, very close fitted, always need hair-spaces between letters. Its best use is for the letters of the word that follows the large initial.

The Initials of the De Vinne Press

The style of decoration to be produced in an initial is more in the province of the designer than of the printer, but it is the printer, not the designer or engraver, who has to accept the responsibility for the unwise selection of unacceptable ornament.

It is not always desirable that the letter in a decorated initial should be in the brighter color. The letter may be more effective in black and its outer decoration in red, so that it shall show at first glance its connection with the text type. A ringed or banded outline about the letter is most pleasing in black, white, or gold.

RITUAL on long-primer and pica bodies is not any bolder than Numismatic, but it could be used in invitations, programmes, and ceremonial printing, in which a little ornamentation is seldom an offense. To those who object to the slight decoration of this Ritual, 10- and 12-point Uncial initials may be acceptable. They add boldness as well as features of quaintness to monotonous roman type. The 10- and 12-point could often be used to add variety of appearance to plain paragraphs. These small bodies can serve as two-line initials for 5- and 6-point text type, but they are petty and not bold enough.

DIFFERENT INITIALS in ten different sizes from 10- to 78-point, of good service as two-line letters, are equally serviceable when set up to appear as full words in separate lines of display. They are of uncial form and adaptable to a text in roman or Black-letter. It is a mistake to assume that a Black-letter line or text must have a strictly Black-letter initial. Fifteenth-century books show that early printers, and the scribes who preceded them, preferred the uncial or rounded form of roman capital over the irregular Black-letter, for the Uncial permitted greater freedom in construction and decoration.

For the ordinary modern book two-line roman capital letters should be preferred; for the book treating of medieval subject matter select the uncial shape.

30-point

This uncial shape of capital can be used with roman and Black-letter, either as an initial or for words of display, or as an aid in spacing and justification. It is an accepted form in church work. Some publishers approve of it in their advertisements and circulars, but it should not be used freely for ordinary commercial printing. The larger sizes and the Decorated 30-point were designed and made for the special use of the De Vinne Press; the smaller sizes are from German and English type-foundries.

The Initials of the De Vinne Press

The ordinary two-line letters provided by type-founders, with but little shoulder, are graded so that they advance in size by two and four points. This grading is entirely insufficient for the different linings that will be needed for different sizes and cuts of text type and their unavoidably unequal leading. The selection and adjustment of a true-fitting initial letter call for much discretion and not a little skill on the part of the compositor.

Sometimes the only size that will serve is found in the capital letter of a lower-case font. To make proper use of this letter, it will be necessary to send it to the electrotype foundry and have the lower shoulder cut off.

If this is not done an unsightly white gap appears and the effect of the initial is damaged. The white gap made by this lower shoulder is an offence even to the uncritical reader.

There are other expedients. A short letter like I, with a straight stroke, can be cut in two and lengthened, and other letters may be neatly shortened in the foundry at small loss of time. These are troublesome methods, but the end justifies the means. In another pamphlet may be found many large capitals of italic and other styles that have been lengthened or shortened to make them serve as initials for paragraphs. When the letter cannot be lengthened or shortened, the gap so produced is least offensive at the top of the initial.

 **THE FAC** Initial, a cheap substitute for the Pierced Initial, is made by combinations of small borders about an interior letter. As these borders are troublesome to construct and too often plainly show their joints, the Fac Initial is seldom made now. To be suitably decorative, there should be a new form of border for each new initial, but suitable styles of border are not always at hand.

 **THE PIERCED** Initial, a hollow square of engraved ornament in which the letter of any type can be inserted, was a favorite form a hundred years ago, but is now one of the many neglected styles. A full series of pierced initials is not to be found on sale, and the designing of a properly mated series of borders will be quite as difficult as a special engraving of letters with the borders.

The Initials of the De Vinne Press

THE HIGH or UPSET Initial that lines at its foot with the first line of text and projects upward above this first line, is an old form of merit, but seldom used. It can be made serviceable only in catalogues and open matter in which paragraphs are separated by white lines.

FITNESS is also needed in the style of a selected initial letter, whether plain or decorated. An old-style text type should have an old-style two-line letter; a type of modern cut should be mated with an initial of similar face. This is not easily done. All that can be expected of the compositor is that he will do the best he can with materials that are available. He may have to mate text types of Caslon, Cadmus, or Renner with initials of other faces of old-style that are of proper height, but initials so selected should not present the appearance of dissimilarity or unfitness.

The two-line letter of an advertisement is usually followed by one or more words of large capitals of the text type. In book work it is customary to follow this initial with small capitals, for it often happens that full capitals will not line with the initial at the top of the first line. By old usage, a large initial in Black-letter was followed in its first line by a word partly in capitals and partly in lower-case of the Black-letter text. This treatment is not approved now. Two or more Black-letter capitals together are a disfigurement to the composition, yet all capitals of roman or of any other form of plain letter may not be used with acceptability. It is required that the type of connecting words should be of quaint form. When the Uncials here shown are too wide, the thinner styles known as Glyptic, Cabalastic, Century, etc., could be used in full words. These styles, not in case, are kept in paper packages, and may be selected with advantage in compositions that call for unusual care (see Office Specimen Book for specimens). Care should be taken that the alien faces so substituted shall agree in some feature with the Black-letter of the text.

The Uncials of small size, shown on a previous page, are of service as connecting letters or words between a leading large initial and the text type that follows, as aids to even-spacing in a Black-letter text, as subordinate initials in that text, and even as separate lines of display. They can be used with propriety in many forms of modern printing, and are especially favored by churchmen and publishers.

THE MONASTIC

The Monastic Initials here shown are the designs of William Morris and Burne-Jones, made by these artists in old German style for the books of the Kelmscott Press. They are in a series of six sizes, but the alphabets for each series are not complete.

Letters not in case will be furnished on request.

When a real need arises, intermediate or larger sizes will be photo-engraved to order. Some of the letters are provided with blocks for two and three colors.

This Monastic style of initial is adapted for texts in Satanick or in any of the earlier forms of Black. It is not so well adapted for texts of small roman type or for modern faces of Light-faced Black.

Each letter, as a rule, is of a form easily identified, even when it is of unusual shape. Note also that it has about it a ring or band of white as an aid to greater perspicuity. The decoration attempted, extremely simple and with few engraved lines, does not produce the appearance of rudeness or coarseness.

We have also a few initial letters in the medieval style of design, but in modern style of engraving, showing white letters within a pictorial framework. The Medieval Initial is just as fairly presented in the following pages showing Caxton and old French initials.

ZEESE No. 23

The caps and the pendants to these letters can be used wisely only in very open display. Never insert the pendants in close or solid composition. The side decoration should be kept in the margin at the left when it is possible.

These attached hair-line decorations may be of service as tail-pieces for short pages or in other gaps. Some of them will need a horizontal hair-line brass rule at the broader side.

A decorated initial is most useful when on a square metal body. Those on bodies of an irregular form with

pendants of trailing decoration at top, side, or foot should be carefully notched in the electrotype foundry with true right angles. Notching with hand saw and file produces notches that throw types off their feet.

Initials with white letters within a solid or nearly solid background are much improved in appearance when a separate block is cut for the letter only, so that it can be printed in a brighter color of ink. Scarlet red is the color most approved, but the colors may be reversed with good effect—black for the letter and red for the background.

In compact composition, a properly selected initial is not so wasteful of space as the ordinary displayed heading with its unavoidable blank above and below. The initial occupies less space, and to the listless reader is more inviting.

A MITRED rule border, single, double, or parallel, to inclose the engraved initial was once considered by publishers as a much-needed attachment when it had not been so made by the engraver. This method of fencing in the letter is not in much favor now. It may damage more than improve. Do not inclose an initial in a rule border without request. Exception must be made for an initial of irregular form (as in L or P) that is to be printed upon a ground tint made up from light-faced combination border: a rule around the tint border so constructed is really needed to give regularity of outline. But do not attempt to improve a letter in one color only by the addition of a line or a combination border.

INITIALS WITH TRAILS

This letter E has blocks for color only in the square that has the letter.

All the large initials on this page have been made indistinct with excess of ornament and are relatively unpleasing when printed in black ink only. They need added color to show a distinction between the letter and the ornament. Select them only when specially ordered. In any kind of composition the left side of the *letter* should be made to line vertically with the type work of the paragraph. Ornamenting lines beyond the letter should always project in the margin. The irregular projections at the top, right side, and foot of the letter call for corresponding changes of measure in the type work, and this irregularity is always unsatisfactory.

BACKGROUNDS FOR INITIALS

No. 14

No. 15

No. 16

No. 17

No. 18

No. 13

THE backgrounds here shown were designed and engraved for use in ecclesiastical printing, but they can be used for ordinary work. Some of the light-lined borders of the house that can be arranged in different shapes will be found equally useful as ground tints for initials.

BACKGROUNDS FOR INITIALS

No. 11

No. 12

THESE backgrounds, when separately printed in pale color, provide a squared and symmetrical form for initial letters of irregular shape that have no attached exterior decoration. They cover up the unsightly gaps of white space made by their irregularities, and keep the page so treated in harmony with the compact type of the text.

If the initial letter is to be printed in scarlet, the color for the separately printed ground tint may be in a paler scarlet, for the decorative lines of the background will not be an offence if they show faintly in the print of the letter; but if contrasting color be selected for this background, the plate so selected should be electrotyped to receive a transfer of the letter only, and the letter so transferred must be entirely cut out of the plate. This cutting out will prevent a slight but unpleasing appearance of the decorative lines through the letter.

PIERCED INITIALS

These blocks are mortised so that they can admit any letter. See page 87 for two illustrations of constructed squares or panels of type borders.

HOME-MADE

DECORATED INITIALS may be constructed by the compositor from pieces of combination border that fully fill the body, but the difficulty met in finding border faces sufficiently light in color and in needed variety is a discouragement. The effect produced seldom warrants the cost of labor and of mitred brass rule. As a general rule, the engraved initials shown on previous pages will be much more pleasing to the publisher and the reader when they have been wisely selected to mate with the matter of the text.

WHEN BORDERS are insufficient or impracticable, the stock ornaments of type-founders may be used to good advantage, but they should be carefully selected and not be incongruous in the descriptive matter of the text. Ornaments of general adaptability may be seen in the second part of the Office Specimen Book, that shows Borders, Head-bands, Tail-pieces, etc. The ornaments shown on pages 332-3 will be found generally acceptable. Medieval designs on pages 323-5 will be of service.

A CONSTRUCTED INITIAL surrounded with a narrow lace-like edging that has many points turning outward is not so pleasing as an outer border of plain line only. A square outline to the construction will be more acceptable. Perfect squares of fine and close engraving as in 8, 22, and 26 (see opposite page), or tile patterns as in 10 and 19, will be more manageable.

No. 27

No. 28

The Initials of the De Vinne Press

THE INTENDED EFFECT of a paragraph or a page composed in Old Black-letter will be damaged if it is preceded by an initial of modern design, even if that initial has been carefully drawn and engraved. The sturdy initials of Morris or the quaint forms of Caxton or of Old French will be more acceptable.

THE ROMANCE INITIALS are complete with all letters, and for some we have the blocks for three colors. Colors are needed to develop the merit of the design. They will be found of good service in illustrating poems and troubadour romances, or other writings concerning the French literature of the fifteenth century or of earlier periods.

THE STUART INITIAL No. 1 is an acceptable initial for plays, poems, or stories of English literature during the seventeenth century. The designs are in the spirit of that period.

CASLON INITIALS No. 12 are also English, but of the style of the eighteenth century. They show more careful engraving, but lack the spirit of the Stuart Initials.

THE WEST INITIALS, of which we have the original designs, show a good form of the eighteenth century. Of the small size we have a complete alphabet. A larger size is not complete, but it has some letters cut for two colors. The smaller size loses by its reduction and does not fairly show the merit of the design.

ITALIC or inclined capitals of any kind are needed as initials only in compositions of nicety. For an *ordinary book* with preface or paragraph in italic, begin with a regular two-line roman letter and connect on the first line with a word or words in capitals of the roman text type. That done, set the rest of the work in italic lower-case. A collection of irregular two-line letters of italic form that have been lengthened or shortened to keep them on line with text type may be seen in another pamphlet.

CAPITALS of ENGROSSING or of OLD FRENCH SCRIPT, in some kinds of job work, may be a more pleasing substitute than italics for initials. A capital of body 48 or smaller can be connected on first line of text type with a word of the same face of capitals on bodies 10, 12, or 18, and will be more satisfactory than the ordinary italic with angles that are irregular, and kerns that break off or make ungainly gaps.

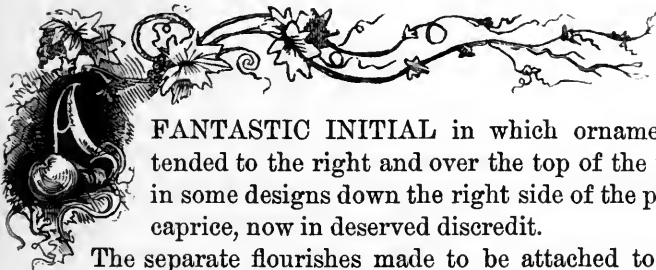

The Initials of the De Vinne Press

SILHOUETTE INITIALS in Italian Renaissance style may be properly selected with advantage for some kinds of books and pamphlets and for ordinary commercial job work. These initials, of which we have all the characters with some detachable pieces, are not to be recommended for any literary work of the fifteenth century, for this silhouette style, although based on old models, is thoroughly modern in treatment. Its pendants and flourishes will prove an annoyance in compact composition.

OF INITIALS WITH TRAILS or added pendants we have a large variety, with complete alphabets, but many are over-decorated and require the aid of color to show the real intent of the designer. The smaller sizes with black centres are most useful. Flourishes, trailing vines, or profuse outside decorations interfere with type and make trouble without improvement. With an initial of this class, composition should begin in a measure wider than that selected for the text type, and the flourishes or decoration at the left side should overhang in the margin, so that the letter on that side shall line vertically with the type work.

Initials with trails are not adapted for the plain composition of squared and symmetrical pages. They may be used to a limited extent in pages of poetry and in open display work, but in all cases the designer's intended irregularity should be aided by putting the decorative part of the initial in the margin.

Profusely decorated initials of Black-letter are entirely out of fashion, equally disliked by publishers and readers. Some are of high merit, but they should not be selected without order.

FANTASTIC INITIAL in which ornamentation is extended to the right and over the top of the text types, and in some designs down the right side of the page, is another caprice, now in deserved discredit.

The separate flourishes made to be attached to initial letters should never be added to the initials for which they are provided without order. They may be of value as tail-pieces at ends of short pages or as stop-gaps in bleak places.

Two-line Letters

of Roman Form

TWO-LINE LETTERS

CONDENSED SHAPES of type for the main lines of title-pages are gradually passing out of favor. Preference is now given to capital letters of full width and of the same shape as the type of the text that follows. They are undeniably plainer and more consistent as to style.

Some title matter seems to compel the use of condensed type. For this purpose prefer the wider shape of the series shown on page 97. For a title-page of few lines avoid all condensed letter. Many words that have to be crowded into one pinched line will make a better appearance in two lines of same face and style.

Publishers ask for two-line letters of the same style as that of the text type which they introduce. This is not easily done. Type-founders do not make a complete series of two-line letters for every new cut of text type, or even for the Real Old-style (or Caslon Old-style, as it is often called). Their gradation is irregular, and there are not sizes enough to line neatly with every combination of solid, thin-leaded, and thick-leaded text. The faces of Ancient Roman, Bradford, MacFarland, and Fifteenth Century seem to be the most serviceable approximations. Capitals of the larger sizes of Real Old-style are to be had only in fonts that have attached lower-case, and the larger they are the more need there is of cutting off the shoulder that produces an ungainly gap.

When an Old-style text type is large and leaded, and needs a large initial, the regular two-line letters of Elzevir face may be approved, but they are not so pleasing for solid composition.

Modernized Old-style capitals are more used than any other for two-line letters in all kinds of Old-style composition. Few can detect the points of difference. For an initial, the condensed shape is to be preferred. A five- or six-line pica initial of full width always shows too much of white both within and without the letter. Of these condensed letters of large size we have a fair variety, but with attached lower-case. Few type-founders make in full series two-line letters of larger size than 36-point, but some of these larger sizes are to be had of the type-founder when they are really needed.

The face to be preferred for matter set solid. Has arabic figures for all the sizes. Larger sizes of a similar face may be found in the No. 13 series of Bruce Foundry, but if they are used as two-line letters, the shoulder at the foot of the letter must be cut off. When this face has been selected for the main display line of a title-page, avoid the use on that page of any form of perceptibly condensed type. When put together, the broad face and the pinched face make a discord, but the Half-title and the moderately condensed 105 series may be used on one page with acceptability.

The MacFarland face (which see among Roman text types) has many of the peculiarities of the Ancient Roman, but it has an attached shoulder that unfits the capital for use as a two-line.

The Bradford, with a lower-case, is the American reproduction of the German original.

The Fifteenth Century, in six sizes, is an imitation of a crude type made by some early printer. It finds favor among advertisers, but it is not recommended for an initial in book-work.

OLD-STYLE CONDENSED

From American Type Founders Co.

WE have other faces of Old-style Condensed capitals, but with attached lower-case alphabet. The wide shoulder at the base of any capital letter unfits it for use as a two-line for a text type, but it can be used in title-pages or in open display. Of this face there are nine sizes. See *Text Types*.

Old-style Extra Condensed, in four sizes, is kept in stock, but it is provided with lower-case alphabet, and is of too condensed a form to be of service in any but very narrow measures.

Two-line letters made strictly according to the form approved by the first Caslon are not exhibited in a series by type-founders. There is good reason for the neglect. Many of the large capital letters are now out of favor for bad proportions. The capitals S, B, and O are fair examples of their want of harmony with other letters of the series. A critic of the last century who admired the Caslon lower-case objected to large Caslon capitals as "coarse and stumpy." Modern type-founders prefer the lighter and more graceful shape here shown under the name of "Modernized Old-style." The real Caslon Old-style is too thick to be used for a two-line letter for the larger sizes of this face. Preference is given by most publishers to the more symmetrical forms of Ancient Roman, Cadmus or Elzevir, and MacFarland, which fairly preserve Old-style features.

To meet the wishes of modern publishers who object to the needless width of Caslon capitals of large size, type-founders now make their two-line letters of Old-style on a narrower set. So treated the new two-lines make better mates for Caslon Old-style text type, but in trying to produce graceful letters they have neglected two desirable features: the hair-line is made too sharp and the thick stroke in curved letters is not sufficiently protracted. Modernized Old-style type is usually of more pleasing shape, but in the larger sizes it has not the boldness and sturdiness of the Caslon Old-style. The usefulness of letterpress printing has been seriously damaged by designers of types who have tried to imitate the delicacy and refinements of copperplate and lithographic processes. Types should be made to aid the reader, not to show the skill of the engraver.

PLEASING

Body 42

83½

PRINTED

Body 48

94

LETTER

Body 60

108

This series of eleven sizes has attached accents, diphthongs, and arabic figures for each size, but has no signs for \$ and £.

It shows to best advantage as a display letter in the open composition of title-pages or as a heading letter in leaded light-faced Old-style. Is not so pleasing in the display of solid matter and compact type-setting. It needs an occasional thin-spacing of letters that are fitted too close, as in I H E, for the shortened serifs do not keep the vertical thick strokes at proper distance.

When this face of type is selected to appear in two lines, one line immediately following the other, a generous amount of white space should be put between the lines of composition. There should be about as much white space between the two lines as appears within the lines of each letter. This is not always possible, but it is desirable. A letter open within needs openness without.

CONDENSED TYPES. ROMAN FORM

YPES MORE CONDENSED than the Lindsay, Classic, and Cheltenham faces are not approved by publishers for the texts of books. Tolerance of thin letter stops at a face that measures eleven ems or less of its own body. A type of greater thinness is rated as indistinct, and annoying to the ordinary reader. This objection is well founded when it is applied to condensed types of the smaller bodies, but it is not always wise to discriminate against thin letters of large body that are readable, nor against the capital letters of the smaller sizes. In title-pages publishers make use of many sizes of condensed type from nonpareil to five-line pica. The taste for condensed capitals in title-pages is declining, but there are readers who consider them as more graceful than types of standard width.

Poetry containing many syllables to the line needs condensed letters. When a large and readable type has been selected for a book of poetry, the compositor often has to break a line of many words, and make it appear in print as two (sometimes three or four) lines of type with disgracefully ragged endings. We have not in this feature wisely followed some old examples. A Spanish book of the sixteenth century, recently studied by the writer, contains two distinct faces of type in each line of narrow measure. The important words were in types of full width, but unimportant particles like *the*, *and*, etc., were set in a condensed letter. The two faces were on the same body, of the same height and thickness of stem, and lined neatly, making a symmetrical page. Modern poetry would be neater if this simple method were practised.

One reason for the neglect of condensed letter of roman form is its frailty. Its hair-lines have been made unnecessarily long, sharp, and delicate, so that they bend, gap, or thicken irregularly under ordinary usage. Another reason for this neglect is the additional cost of condensed roman types. Printers prefer types with thicker lines that cost less and stand reasonable wear.

Condensed letters of roman form are not objected to in other branches of printing. They are used by lithographers, copper-plate printers, and designers for photo-engraving.

On an advanced page will be found condensed type of Old-style peculiarities and with a full lower-case series.

Condensed letter with lower-case of thicker stems will be shown under the heading Title Type or Fat-face.

Roman Capitals

of Fonts that have Lower-case

Text Types

The Text Types of the De Vinne Press

MICROSCOPIC TYPES

SOLID

B RILLIANT, or three-and-a-half-point, is the smallest size of book type made by American type-founders, with capitals, lower-case, figures, points, and italics. In ordinary composition one square inch contains about 1000 pieces of metal; of the lower-case 1250 are needed to make a page of matter of the thinnest and most space between words (usually set out of thin brass sheets) nearly twice as many are needed. Superficial measurement shows that one inch covers about twenty lines; and one square inch of this size, ordinary matter set solid, will contain about 125 words.

This size is seldom used for the text of a book. In 1858 the De Vinne Press printed a collection of thirty humorous poems under the title of "Brilliant" in this microscopic type. The leaf was one and five-eighths inches wide by two and three-tenths inches high. Its 112 printed pages made, when fully bound in gilded leather, a book one-quarter inch thick, weighing but one-half-ounce. Ten editions of this collection were soon dispersed and put out of print.

The French-English Dictionary of John Bellows, Gloucester, England, 1872 (small enough to be carried in the side-pocket of a traveler, for which it was planned), is the most generally useful book in which brilliant type has been used for the text. It is a marvel of skill and good taste in composition and presswork.

Brilliant type now finds its chief employment in making of books of tables of figures that must be presented in the smallest possible space for carrying on the person of the holder. It is also much used for reference letters in the side- and foot-headers of a book of the Bible. It is a frail letter, composed with difficulty and easily bruised by ordinary manipulations on an imposing stone or on the printing-press.

In 1849 Laurent and Deberny, type-founders of Paris, published a "microscopic" edition of the "Fables de La Fontaine," a book of 260 pages, in the form of 128mo. The page so made was 62 millimetres high and 30 millimetres wide. It was printed by Fleu Freres, and shown at the next World's Fair.

In 1855 the same foundry published a still smaller volume—Gresset, *Yeu-vert*, and other pieces in the form of a book of 140 pages. The page of this book was 38 millimetres high and 22 millimetres wide.

LEADED

The type used was that of their edition of La Fontaine, but it was leaded and made more readable. It seems of a little larger body than the type of Didot.

In 1856 Edwin Troas published "De Imitatione Christi," on a leaf 47 millimetres high, 30 millimetres wide, 38 lines to the page, making a book of 156 pages. It was printed by Giraudet and Jeannot, in a type smaller than that used by Laurent and Deberny. It appears to be of the same size of face as the type previously made by Didot, but it is not quite so small in body.

In 1827, Henri Didot, a son of Pierre Franois, of Paris, then sixty-six years of age, set with his own hands a full font of type on the French body of two-and-a-half points, with which he printed an edition of the "Maxims" of Roehfmausald and other little books. Twenty-six lines of this type apparently came within one American inch, lineal measurement. The type-founder Frosman of Berlin cut a full font of roman and italic book type on three-point body. The Knashed Foundry of Hazleton has cut a still smaller face on the two-point body.

For the convenience of type-setters it has been necessary to cast these petty faces upon an enlarged body. The only three-point body in practical use in the United States is that called *Excellior*, made for music, piece fractions, and borders, but these types on em-square bodies are not so frail, and can be more readily handled.

The words "solid" and "leaded" may call for an explanation. This text is entirely in brilliant type, but the types of the first column are set solid, or put closely together, while the types of the other side in second column are "leaded," or made wider by putting a thin space between the lines with intent to make the text more readable.

This font has no small capitals or accents. Figures, 1234567890, on an body. We have of the three-and-a-half-point one job case for roman; and of the brilliant, one pair of cases for roman and one job case for italic.

Three-and-a-half-point No. 17. A. T. F. Co. Brilliant No. 2. M. & R.

SOLID

D IAMOND, or four-and-a-half-point, seems to have been first made by Voekens of Amsterdam, who cut a full font of this size in the year 1700. Van Dijk, type-founder for Daniel Elsevir, had shown in 1681 a new size on a smaller body than pearl, but it was not the size now known as diamond, seven-tenths lines to the inch. He had been preceded by Janoon de Sedan, who made for his use in 1620 some very small types which were then called diamond, but they are not much smaller than modern pearl. With this type he printed miniature editions of Horace and Virgil, that were then regarded as triumphs of skill.

William Pickering of London made the greatest use of diamond during the nineteenth century, printing many classic authors in miniature form. His series, begun in 1822, consists of Cicero de Officiis, Virgil, the "Jerusalem Liberated," of Tasso, the Sonnets of Petrarch, Dante in two volumes, Castulos, Propertius, and Tibullus, all in diamond type on leaves about two by three and one-half inches. His editions of the *Iliad* and *Odyssey* in Greek type of faultless form on diamond body are marvels of accurate composition and superior presswork. The limit of useful miniatures has been attained in brilliant, for it is not practicable to cut by hand types for a body smaller than 3¹/₂ points; yet the Benton punch-cutting machine has made perfect letters in relief much smaller than any here described, although they cannot be made in movable letters for practical printing.

A recent miniature edition of Dante (Milan, 1878) is on a leaf one and three-eighths inches wide and scant two inches high. The types for this little book were designed and cut in 1834 by Antonio Farina. He called them *Occhio de Mosca*, or fly-eyes. The types were not distributed, but destroyed after the full impressions of each form, new types being required for each new form.

LEADED

The type of Farina was twenty lines to the inch, but it was not so small or so readable as the minute type of Henri Didot. Nor was it so well cut and cast as the brilliant type of John Bellows, which was cast on a body of the same size.

In 1875 the University Press of Oxford printed an edition of the Bible in diamond type, two columns to the page, each column 70 lines long. The leaf is two and one-sixth inches wide, and four and one-half inches long. The book bound is one-half inch thick, and weighs a trifle over three ounces avoirdupois.

The smallest good type of the fifteenth century known to collectors is a remarkably neat roman letter of the size nonpareil (about twelve lines to the inch), which was used in 1488 by Giovanni and Gregorio de Gregorini of Venice, in a beautiful manual of the Offices of the Church. Considering the difficulty of cutting symmetrical letters on so small a body, and of casting them in types at this early period in the history of type-founding, when tools were imperfect and experience was limited, this font of nonpareil may be rated as a triumph of early type-founding.

Types as small had been made before. In 1480 John Froben of Basle printed an edition of the Bible in Latin from types of the size nonpareil; but these types were of Gothic form, and were not so neatly cut or cast.

Diamond has seventeen lines to the inch and contains about one hundred words to the square inch of solid composition. ¶ We have two pairs of cases for roman and one job case for italic.

not offend by flagrant eccentricity. We keep small fonts only of a few sizes and faces that are of good service in giving a distinct French flavor to short prefaces, extracts, mottos, and quotations in books for which French mannerisms are appropriate.

The faces on this page were made from the designs of Claude Motteroz of Paris, who has here tried to graft some Old-style mannerisms on the modern cuts of roman letter. He widens all the letters (a and s especially) and protracts the thick strokes, claiming that the very small type of Body

Tous ces grotesques mots, Gaillarde, Trimégiste,
Gros-texte, Gros-canon, fastidieuse liste
De vains noms qu'ont portés tant de types divers,
Et dont le seul récit attristerait mes vers,
Noms qui de leur grosseur et de leur différence
N'ont pu donner encore aucune connaissance,
Il sut les transformer en d'autres plus heureux
Qui marquent clairement tant de rapports entre eux.
Son nouveau typomètre offre une règle sûre:
Chaque type s'accroît par égale mesure,
Et la gradation qu'avec art il suivit
Est aussi juste à l'œil qu'elle est claire à l'esprit.

THE LEGIBILITY OF PRINT, or the hygiene of typography as he names it, was considered some years ago by Dr. Javal of Paris, in articles contributed by him to the « Revue Scientifique » of that city. The height and width of print letters, the breadth of the stem or thick stroke, the sharpness of the hair-lines, the length of the serifs, and the relief of white space within and without each character, were separately examined for their effect on this legibility. His conclusions are but incompletely presented in this summary:—In reading, the eye insensibly pursues an imperceptible horizontal stroke through the middle of each line. The legibility of print is largely governed by the shape of letters above this horizontal line. The lower half of the type in this line contributes but little to legibility. Cover the upper half of the line, and the print below will be indistinct and perhaps unmeaning.—The eye has been trained to read words at first glance; we do not separately identify and combine the print letters

to form a word.—Serifs at the ends of many thick strokes are needed to keep the letters apart and produce distinctness.—A broad letter is more readable than a tall narrow letter, but the breadth of type cannot be regulated by arbitrary rule.—Some relief of white space between words is important, but the insertion of leads between lines is not so important for legibility as is believed by many readers.—The doctor favors much compactness in composition, but this conclusion is opposed by the experience of publishers. Leads between lines can be and often are used to unwise excess, but leaded composition is preferred by all readers for its superior legibility. Leading does not make single types any clearer, but it does relieve the eye from the gloominess of excess of black.

of type-founding and of paper-making. His system of typographic points supplanted that of Fournier. At his suggestion, and by his aid, the paper-maker Johannot first made the papier vélin, or supercalendered paper. His most celebrated works are the "Dauphin" edition of the classics, in thirty-two volumes, 4to, and the "Artois" edition of sixty-four volumes, 18mo, which

are highly prized by all collectors. Firmin-Didot, the second son of Ambroise, and brother to Pierre, born 1764, died 1836, was also expert as a printer.

Motteroz-face. Body 11. Turlot. One job case

FIRMIN-DIDOT was appointed printer to the King and to the French Institute, and was decorated with the medal of the Legion of Honor.

His portrait is in the gallery of the Louvre and the hall of the National Printing Office, Paris.

AMBROISE FIRMIN-DIDOT, the son of Firmin, was born at Paris, on the 20th of December, 1790, and died on the 22d of February, 1876. He was eminent as a printer and as the publisher of famous books; was a punch-cutter and type-founder, the president of

several typographical associations, a diligent collector of books, and the most learned typographer of France. ¶ One pair of cases for roman and one job case for italic.

French Light-face (Roman No. 7). Body 10. Mayeur

FRENCH

FRENCH TYPE-FOUNDERS made a departure in their types about the beginning of the nineteenth century. Bodoni of Italy had set them enviable examples in the roundness, clearness, and openness of his new faces of type, which compelled the admiration of all readers and the imitation of printers in every part of the world. The Didot Printing House at Paris was not satisfied to be a servile imitator. It maintained the roundness and clearness of the Bodoni letter, but it shortened ascending and descending letters and produced all the needed openness of print by use of more leads. Its new characters were made a trifle wider than those of Bodoni, and barely escaped the censure of undue obesity. The stem or thick stroke was widened and the hair-line and its serif made sharper. It was supposed that the legibility of print would be increased by broadening the thick strokes and by sharpening the hair-line—a treatment that emphasized the contrast.

The new face thus made by the Didot Printing House found favor in England even among printers who had refused to make use of the excessively black and corpulent faces produced by Robert Thorne. Readers weary of the hard angles and stiff forms of the Caslon model accepted the new Didot face as a welcome improvement. ¶ We have one pair of cases for roman and one job case for italic.

first stereotype edition of the New Testament. He also earned a good reputation as the publisher in the United States of the Bible in folio form. To the business of stereotyping he soon after added that of type-founding, in which he was remarkably successful. With the aid of Edwin Starr, then in his employ, he made the electrotype matrices which enabled him largely to increase the stock of his foundry. After the death of James Conner in 1861 the

foundry was managed by his sons and grandsons, who merged the business in that of the American Type Founders Company. ¶ Of this font we have two pairs of cases for roman and one for italic.

9-point No. 18

The Text Types of the De Vinne Press

FARMER

IN 1820 LAWRENCE JOHNSON, a printer of England, established as a stereotyper in Philadelphia. In 1833 he formed a partnership with George F. Smith for the purpose of buying the type-foundry of Richard Ronaldson. Under the new management the operation of the foundry was largely extended. In 1843 George F. Smith withdrew. In 1845 Johnson admitted to partnership Thomas MacKellar, John F. Smith, and Richard Smith, who had been trusted employees of this house. Peter A. Jordan was added afterward. Before his death in 1860, Johnson sold the foundry to his junior partners, who continued the business under the name of MacKellar, Smith & Jordan Company, but the house never lost its old name of the Johnson Foundry.

For many years the Johnson Foundry had a great distinction among printers for its diligence in electrotyping foreign designs, as well as in originating new faces for ornamental types and borders. The appetite for typographical decoration was largely developed by the publication of the "Typographic Advertiser," a quarterly journal that contained a deal of appropriate matter from the pen of Mr. MacKellar. An examination of their quarto specimen book of 1865 will show a surprising quantity of decorative material now out of fashion. John F. Smith was born January 20, 1815, and died November 1, 1889. Peter A. Jordan was born in Philadelphia the 30th of May, 1822, and died there the 25th of March, 1884. Richard Smith died September 8, 1894. In 1892 the MacKellar, Smith & Jordan Company became the Philadelphia branch of the American Type Founders Company.

¶ This No. 13 face of Long-primer contains an unusual variety of signs, accents, tied letters, and irregular sorts. Of this font we have seven pairs of cases for roman, two for italic, six for accents, and five for algebraic and astronomical signs.

BROAD-FACE

BROAD faces with unusually long serifs, made to fill the gaps of widely separated thick strokes, may be disappointing in book work. Stems too wide apart hinder neat spacing. Book printers and publishers object to them as mechanically incorrect, for the wider separation of stems makes more difficult the close and proper fitting of contiguous types. In this font of a moderately broad face,

Measurement in 12-pt. ems

these difficulties are fairly avoided.

CAPITALS . . 17

Lower-case . . 11½

Broad or expanded faces, not good for strict book work, are often needed for any composition in which it seems

necessary to fill space as to width more than as to height. A broad face with plenty of white relief gives a clearness to print not to be had by the use of capitals or of bolder type, while it is entirely free from the appearance of bold or vulgar display. It can be used to good advantage for the short lines in circulars and catalogues and the open display of small job work. ¶ One job case. No italic or small capitals.

10-point, old body

LIGHT-FACE

THIS is an extremely light face of decided merit, but too thin and too light to be used as a text type for descriptive matter set solid. It shows to best advantage in an extract, in a motto or verse of poetry, in leaded or double-leaded matter, or in any work

Measurement in 12-pt. ems

which has broad margins and large spaces of white. It once found occasional employment in the titles or descriptions of plates when these titles were printed, as was the fashion, on thin paper facing the

CAPITALS. . . 16

Lower-case . . 10¾

plate, but in any place it causes a strain on ordinary eyesight.

¶ Of this font we have one job case only without its italic. It is a font now in slight request and will not be replenished. Use it only for extracts as may be ordered.

11-point, old body

FARMER

BENJAMIN FRANKLIN, when in Paris, bought from Fournier, the inventor of a point system, a complete equipment for a type-foundry intended to be established in Philadelphia. To this end Franklin asked his grandson B. F. Bache to receive instruction from Fournier, that he might be qualified to manage the foundry. Franklin and his grandson arrived in Philadelphia in 1775, and began the business of type-founding, but Bache was not successful. Thomas says that he did not or could not make good types. The foundry was neglected, and Bache turned more of his attention to printing. The type-founding apparatus, given to his relative Duane, was by him transferred to Binny and Ronaldson, who acknowledged that they had received many valuable suggestions from the French tools so provided.

The point system was here in 1775. It may be assumed that these Philadelphia founders used the Fournier moulds, and that the standard of sizes they adopted was accepted by their successors, L. Johnson & Co., and the MacKellar, Smith & Jordan Company. The deviation afterward made (about four points in one thousand) may be understood as the result of imperceptible changes produced after more than a century of wear.

Thomas says that Fournier sold old tools. This does not seem very probable. Franklin, himself an inventor, would most naturally prefer the very latest invention in type-making. ¶ *Of this font we have four pairs of cases for roman, one pair for italic, and four cases for accents and various diacritical and mathematical signs useful in educational works.*

plates previously prepared from this face of type. Do not select it for any composition of length. Its small capitals are unnecessarily small, and its italic is unusually condensed. It has lower-case accents and diacritical marks. ¶ *Of this font we have one pair and one job case for roman, one job case for italic, and one accent case.*

14-point No. 4, old body. A. T. F. Co.

CONNER

GREAT-PRIMER No. 4 from the Conner Foundry was the letter selected by a committee of the PROTESTANT EPISCOPAL CHURCH of the United States authorized to prepare a new edition in folio of the Book of Common Prayer according to the standard of 1892. A limited number of copies of this edition in folio, suitably decorated, was printed in 1893 by the De Vinne Press.

This 18-point type was also used by the De Vinne Press in printing the great folio of HEBER BISHOP, descriptive of his collection of Jades now in the Metropolitan Museum of Art.

Selection of this face was made after a critical examination of many styles shown in the specimen books of the leading type-founders here and abroad. ¶ Of this font we have five pairs of cases for roman and one job case for italic.

M. & R.

BREVIER B of Miller & Richard is another small font that has been needed mainly for the repair of bruised electrotype plates made from this face, or for the composition of paragraphs or extracts which have to be added to or inserted in a text type of the same face on a larger body. It is, without doubt, a letter of good form, well cut and cast, but how much better or any way better is it than other faces of Brevier made before and after this was introduced? Of the many critics of typography who pronounce swift judgment on new faces, how many are there who could point out the peculiarities of this face when put in contrast with other faces on same body? Did it ever make a book more attractive or salable? One square inch of solid composition in brevier takes in about thirty-two words of ordinary matter; in leaded composition, about twenty-five words. ¶ We have three pairs and one job case for roman, one pair for italic, and five for accents.

8-point B, old body

BOURGEOIS C of Miller & Richard is on a body that is in steadily declining request. It appears occasionally in the weekly newspapers devoted to literature and art, but rarely in new books of 12mo form. It does good service in 12mo and 16mo editions of the Bible and hymn-books, and in preventing an undue thickness of book in a novel that threatens to exceed the customary limit. Publishers here and abroad have reached the conclusion that Bourgeois or 9-point has too small a face for a new book intended to be attractive and readable. The reprinted novel in two columns to the octavo page is no longer desired by the reader or provided by the publisher. When a smaller body of type is required for any other purpose, as for a dictionary or encyclopedia, preference is always given to a type that has bolder lines. This Bourgeois C face is of pleasing cut, but it is too weak and delicate to meet the taste of the ordinary reader. The old demand for books in small types with leaves of 4x6 inches or less has abated. Readers ask for types that can be easily read. One square inch of bourgeois or 9-point of solid composition will take in about twenty-eight words; if leaded, about twenty-one words. ¶ We have three pairs of cases for roman, one for italic, and five for accents.

and workmen were imported mainly from Holland. The first type-foundry to earn a fair reputation beyond the Scotch border was that of Wilson & Baine, which began at St. Andrews in 1740. Alexander Wilson, the successor, took the type-foundry to a village near Glasgow, and gradually made it one of the best. His early types were copies of those made by William Caslon, but in later years his letter showed that he had carefully studied the models of Baskerville of Birmingham. Association with the professors of the Glasgow University and their famous printers, Robert and Andrew Foulis,

increased Wilson's zeal for improvement. ¶ We have seven pairs of cases for roman, one for italic, three for accents, and one for astronomical signs.

10-point No. 28, old body

AT the beginning of the nineteenth century Scotch types and Scotch printing were in great request. English authors did not hesitate then and afterward to express their preference for the cuts of type made by Wilson, or by Miller & Richard, or Phemister, over all the English type-founders, Thorne, Fry, Jackson, and Cottrell. Publishers confidently offered to Scotch printers orders for the making of superior books. There was a thoroughness in the workmanship of all Scotch books that commanded general respect. It is worthy of note that the phrase Scotch-face was then applied to a new face of type planned by Samuel Nelson Dickinson of Boston. ¶ Four pairs of cases for roman, one pair and one job case for italic, and four for accents.

A. T. F. CO. No. 26

THIN lines in type produce feeble printing. The imperfect legibility of ordinary faces of roman text type is noticeable in smaller sizes, and especially in faces of Brilliant, Pearl, or Diamond, which are hard to read and print. Too much ink makes types thick and muddy; too little ink makes them gray and indistinct. When inked with discretion, the effect of presswork from small types is often that of feebleness. These small types show little of the stem and still less of the serif and hair-line; they have not surface enough to carry a good body of ink. To remedy this fault, Quantin, an eminent publisher of Paris, had made for his miniature editions a remodelled roman face on the antique model, in which all the lines were nearly of uniform thickness. A print of this face will be shown on an advanced page under the name of Louis XV, Body 5.

Readers of failing eyesight rightfully ask for types that are plain and unequivocal—that reveal the entire character at a glance and are not discerned with difficulty by body-marks joined to hair-lines and serifs that are but half seen or not seen at all. The Morris and Jenson styles are needlessly bold for readers of excellent eyesight, but they are attempts at an improvement in the right direction and will never go out of fashion entirely. This No. 26 face of the American Type Founders Company seems to combine the best features of an easily read type. ¶ Of this font we have two pairs of cases for roman and one job case for italic.

6-point

WEAK types make weak presswork. Book critics have rightfully complained of a deficiency of blackness of ink in recent books. In much of this objectionable presswork the fault is due more to weak types than to weak ink. Under the conditions that control ordinary presswork it is not possible to show vivid blackness on thin lines that will not hold the needed ink. When thin-faced letter is leaded and is surrounded by an excess of white, the thin lines must seem comparatively gray. Excess of ink will not always give the desired blackness.

Durable features are shown in this No. 26 face of broad form, which is designed for hard usage on newspaper work. The hair-lines are unusually thick, the serifs are properly bracketed to stems, and will successfully resist the wear of the moulding-brush, the lye-brush, and the proof-planer. It will take ink readily and make a readable print without undue impression.

Students and book and newspaper printers are fully agreed as to the worthlessness of the sharp hair-line. Hair-lines should have a visible thickness even in small sizes, for this increased thickness is really needed as much to give legibility as to prevent wear. ¶ Of this font we have two pairs of cases for roman and one job case for italic.

new styles of roman type have been introduced.

They have had their day of favor, but they do not

now supplant older styles of merit. The Caslon face

of 1732, the 1828 face, this Scotch face, and the

Scotch-roman are examples. After a careful survey

of all the styles, discerning critics say that the old forms have not been surpassed. Every large printing-house has condemned as out of fashion and out of use fonts of type that were in excellent condition, and has put in their places other styles of inferior merit; but it is not proved that the new is always better than the old. ¶ *Of this font we have two pairs of cases for roman and one job case for italic.*

14-point

BRUCE. No. 11

FIVE-POINT, or PEARL, is a small size that finds but little employment in ordinary book work. It is sometimes selected for the side-notes and foot-notes of small pages, but rarely ever, and seldom wisely, for quoted lines of poetry or similar extracts that may be inserted in the middle of the text. It has to be used occasionally with larger type, when it is selected for the words that more fully explain a large illustration and that could not be set in a type of larger letter. When books are to be of very small size, with leaves about two inches wide by three inches long, a 5-point body does good service; but the demand for books in minute type is not large. They are bought as typographic curiosities; few book-buyers have the eye-sight that enables them to take pleasure in reading microscopic letters.

Manufacturers find 5-point type a serviceable letter for books of pocket sizes, containing tables of figures that give a fulness and exactness of description which cannot be trusted to memory.

Many years ago the New Orleans "Picaune" refused to enlarge its sheet for the steady increase of advertisements, which it ordered set in Pearl type. The change was not a profitable experiment. Experience showed that Pearl type, difficult to print with clearness on good book paper, was much more troublesome on ordinary news paper. The shallow counters of the small type soon filled up with ink and made muddy presswork. Figures and fractions on an en body were illegible. Advertisers and readers complained that the printed advertisements were hard to read. Another discouraging result was the exceeding frailty of the letter; although the new face of Pearl cost much more than its approximate larger size of Agate, it wore out too soon and had to be condemned when it had received relatively few impressions.

One square inch of pearl, in solid composition, takes in about sixty-nine words; in leaded matter, about fifty words. [Of this No. 11 face we have three pairs of cases for roman and three job cases for italic. Figures are on en and 3/8-em bodies. Fractions are on em body. This font has no accents.

5-point, old body

EVEN-POINT, or MINION, is a neglected size. It is too large for ordinary newspaper work, either in news or advertisements, and too small for the text of the ordinary book, yet it has to be kept in stock in every large printing-house, where it finds useful employment in foot-notes, extracts, or the index matter that supplements a text type of larger size. French printers make frequent use of it in gazetteers, encyclopedias, and thick books of reference.

Minion is still a term of endearment for pets and children. Early printers and type-founders applied it to this size when it was the smallest size of type manufactured.

Do not confound Minion with Minionette, which last-named word was used by a Philadelphia type-foundry of the last century to describe a new body for combination borders—a size between minion and nonpareil, which size was the body 6 of the French point system.

The English unit for measuring composed matter is the en-quadrat. The number of ens in the line to be measured is multiplied by the number of solid lines. The unit is different, but the method of measurement is the same as that of the United States. One thousand ens English equal five hundred ems American.

In the French method the space taken by the twenty-four letters of their alphabet is computed as twenty-four letters. The number of letters is determined by filling the line to be measured with repetitions of the alphabet, and counting the letters that can be put in the stick. The number of letters so ascertained in one line is multiplied by the number of solid lines in the matter composed.

One square inch of 7-point or minion, solid composition, takes in about thirty-eight words; of leaded matter, about twenty-seven words. ¶ We have six pairs of cases for roman, one job case for italic, and two for accents.

This 7-point face has superior figures and ordinary accents.

BRUCE. No. 11

LEVEN-POINT, or SMALL-PICA, is the size for serious books to be spread over many pages. For the history of many volumes 12- or 14-point has more favor. Publishers and authors assume that a treatise in large type is more acceptable to the student or reader. It is a mistake to select a

petty type that makes reading troublesome. Types of small size may be chosen for their beauty or appropriateness to the subject-matter, and newspapers, Bibles, prayer- and hymn-books must be printed in small type for the sake of economy as well as for the convenience of the reader. Large types and large leaves are in as much request now as they were a century ago. There is warrant for the belief that in the future a series of big books will be regarded as absolutely necessary to a well-appointed bookcase. But the increased sizes of books call for corresponding largeness in paper and plates, and for greater cost in printing and binding.

Of Small-pica we have sixteen pairs of cases for roman, one pair and one job case for italic, and two accent cases; of 11-point we have five pairs of cases for roman, two pairs for italic, and two accent cases. This size, in addition to the usual accents, is provided with several peculiar signs for reference-marks, and also has a few strange forms of *alphabetical letters, made for some educational treatise.* ¶ One square inch, set solid, takes in about seventeen words; leaded, about fourteen words.

BRUCE. No. 11

THE series shown on this page in size of 12-point is from the Bruce Type Foundry, and was designed by the late August E. Woerner of New York, who died July 27, 1896.

No series of modern type has proved more acceptable for general book and job work. Although not made blacker or overbold with thick lines, it has remarkable legibility. In clearness it is not surpassed by the best faces of the Old-style, but, unlike that letter, it has

no mannerisms of unnecessary quaintness.

Its letters are close-fitted. Each character fills its body as fully as its design permits, but all the characters connect neatly with one another in every possible combination of letters. Uniformity of style is maintained throughout to a remarkable degree. When set solid it is a graceful and read-

able letter, but leading gives it an improved appearance of lightness and delicacy. The general effect of print in this type is that of sustained symmetry. The eye picks out no letter for unevenness or other fault.

Of Pica we have one pair of cases for roman, one job case for italic, and one accent case; of 12-point we have five pairs of cases for roman and one job case for italic.

One square inch of this size, when leaded, takes in about eleven words; solid, about thirteen words.

12-point

BRUCE. No. 19

SMALL CAPITALS are often unsatisfactory. A word in small capitals should be more prominent than one in italic; but as now made they are thin, weak, and make no show. Some publishers prohibit their use in the text, preferring to make distinction with the lighter faces of antique or clarendon.

This weakness comes from planning small capitals of the same height as the round letters of a small lower-case. In this reduced height it is not possible to draw small capitals of a becoming prominence without widening the letters to a degree which makes them bad mates for the larger capitals.

A ready remedy is to plan them taller and give them more breadth. Some French type-founders now make small capitals of greater height and width; others put them on a wider set, so that they seem to be hair-spaced. For the small capitals of most of our fonts hair-spacing will usually be found an improvement that gives increased clearness and distinction.

Small capitals were once an approved style for the running titles of books, but they should not be selected for a running title of few words. Small capitals of 12- or 14-point are distinct, but sizes smaller than 10-point will prove unsatisfactory in this exposed position. At the head of the page they receive too much wear under impression and their shallow counters are soon choked with ink.

Small capitals are rarely used now to indicate emphatic words. The rule that forbids a too frequent use of italics is equally severe on small capitals. They are much too weak for side-headings of dictionaries and catalogues. The lighter faces of antique and title-letter are now preferred.

For the subheadings under chapters one line of small capitals is acceptable, two lines may be tolerated, three lines are offensive. Plain lower-case of small size is a better choice. As usually made, small capitals are more difficult to cut than capitals or lower-case, and this *tempts foundry to make one set of small capitals serve for two or more distinct faces. An inexperienced can seldom detect the mismating. ¶ We have two pairs of cases for roman and one job case for italic.*

LINDSAY

A MODERATELY compressed face is needed for a narrow page as is a round or broad face for a quarto. The reader who loves order and symmetry in print is annoyed when he notes in a page of poetry lines of words that evenly fill the measure while following lines (and often there are many of them) have only the overrun of one short word or syllable not to be placed within the upper line. The short lines have to be followed by great gaps of white that give a general raggedness and an unworkmanlike appearance to the entire composition. This mangling of the cadence or harmony intended by the poet is unavoidable when a letter of broad face has been selected for use in a narrow measure.

Measurement in 12-point ems

Equally unpleasing is the appearance of a broad type of large size on a narrow page. To avoid the faulty division of words (for in the widest measure words must occasionally be divided), the compositor may have to thin-space the words in one line and put em-quads or more between the words of the next line. Types are inflexible; they cannot be squeezed or stretched out.

As we have large types for folios and small types for newspaper advertisements, there should be a similar adaptability in the construction of the types intended for poetry and narrow measures. This tall and stately form of letter is as admirable when properly selected as any other in this book. ¶ Four pairs of cases for roman, one job case for italic, and one accent case.

14-point No. 19, old body. Bruce

LINDSAY

TYPE-FOUNDERS grade types one point apart from 6- to 12-point. The point is .0138, about one seventy-second of an inch. Skipping but one point, founders next advance to 14-point; again, skipping three points, they go on to 18-point. The intermediate size of 16-point is seldom made of a face acceptable for a modern book. Ordinary 18-points are too coarse for a neat book; their types are wide and make uneven spacing between words.

To provide a large type, of approved face and free from this defect, the De Vinne Press had made for its exclusive use this Lindsay face on 16-point body. It was originally designed for the smaller body of 14-point by the late James Lindsay of the Bruce Type Foundry,

The Text Types of the De Vinne Press

BRUCE No. 12

FIVE-AND-A-HALF-POINT, or Agate (the half of 11-point, or small-pica, in vertical measurement), may seem to the inexpert an exceedingly small reduction of body, not worth the cost of new engraving. It finds its greatest service in the advertising columns of newspapers, and it may be considered as the limit of minuteness in that service. It is known among English type-founders as "Ruby." This reduction in size has been accompanied by a serious change in the shape of its letters. The small letters of the lower-case are relatively much broader than those of larger sizes. Ascending strokes like b and d are shorter, and descending strokes like p and q are very much shorter. The widening of the small letters has enabled the punch-cutter to put more white in the centre of each character and to give more width to the thick stroke. This treatment has made the faces almost as readable as the larger sizes of 6-point. For this reason it was selected by the late firm of McKillop, Sprague & Co. for their voluminous Commercial Register. One square inch of this face, in solid composition, takes in about 55 words; of leaded matter, about 44 words.

¶ *Of this font we have two pairs of cases for roman, two for italic, and one for accents. It has superiors for marks of reference, also two sets of figures—one set on en body and the other on two-third em body. Fractions are on em body.*

SIX-POINT, or Nonpareil, is the most used of the small sizes. It seems to have been made for the first time in 1490, by John Froben of Basle, who designed it for an octavo edition of the Bible in Black-letter. It first appeared with a roman face in a beautiful manual of the services of the Roman Catholic Church that was printed at Venice in 1501. Its first name, Nonpareil (unequaled), has been preserved unaltered in all type-making countries, and it was regarded as a marvel of skill in minute letter-cutting.

Six-point, which is one half of 12-point, or its older equivalent, in a vertical lineal measurement, is really only one fourth of that body. One square inch contains in solid composition about forty-seven words; of leaded composition, about thirty-four words.

This No. 12 face of 6-point has thicker lines than the No. 11 face, with the intent to make blacker print and give more readability to the letter. For this reason it is selected for the text type of dictionaries, gazetteers, and voluminous works of all kinds that are made to give the boldest amount of readable matter in a very small amount of space. Contrast this 6-point No. 12 with the 6-point No. 22 of Miller & Richard on another page and note the superior boldness of this face. Its lower-case alphabet is about thirteen per cent. wider, and it is this widening that increases its legibility, as well as its durability under impression. The design and the engraving of this face, by the late A. E. Woerner, show unusual merit. No. 12 is readily moulded in the electrotype foundry and gives satisfactory impressions on ordinary news paper. ¶ *Of this font we have six pairs of cases for roman, one for italic, and one for accents. Superiors and accents.*

FOURTEEN-POINT BODY of this face was selected by a judicious buyer for a new edition of the BIBLE recently printed by the De Vinne Press. Types from many houses were critically compared, and this No. 13 face preferred as combining all the more desirable qualities. It shows graceful shapes in all of its characters, and a skill in the combination of unlike forms that has rarely been equalled. The

demands of readers for large and readable types are increasing, and are more urgent now than ever. The double-columned octavos in non-pareil or in minion are neglected. The greater cheapness of white paper has encouraged this

preference, but a proper care for waning eyesight should be a more important reason. The books that can be read with comfort, and that have received highest approval of librarians and collectors, are always in a large type, and some of the sizes can be used with advantage for the ordinary octavo page. ¶ *Of this font we have thirteen pairs and two job cases for roman and one for italic. BRUCE No. 16

DAVID BRUCE (born in Scotland, 1770 ; died in New York, 1857) was the first of a type-founding family which has done much for the improvement of the arts of stereotyping and type-making. After serving an apprenticeship to printing in Edinburgh, he emigrated to New York in 1793, where he followed his trade as a pressman. In partnership with his younger brother, George Bruce, he began business in New York as a master printer in 1806. Rumors having reached them of the advantages of the new art of stereotyping, David went to London in

1812, and ineffectually tried to get the information he desired from the inventor, Earl Stanhope. From other persons he got, as he thought, enough of hints or suggestions to warrant him beginning the work. On his return to New York he added stereotyping to his business, in which he made a marked success. Three of the most valuable aids to stereotyping are his unquestioned inventions: the shaving machine, which enables the stereotyper to make all plates of even thickness; the "patent-block" of hard wood, which firmly holds the stereotype plate and yet allows its ready release or change to any new position; the dove-tailed packing-box with sliding cover, which secures plates from injury and aids in transportation. In 1822 he withdrew from business. ¶ Of this font we have two and a half pairs and one job case. About thirty-two words, solid, to the square inch.

8-point, old body

GEORGE BRUCE (born in Edinburgh, 1781 ; died in New York, 1866) emigrated to this country in 1795. After serving apprenticeship as a printer in Philadelphia and working as a compositor in New York, he became the business partner of his brother David. Their new enterprise of stereotyping was seriously hindered by the shapes of the types they had to use. Types as then made had no shoulders. The beard or neck sloped at a very long angle from face to shank. The plaster used in stereotyping filled these sharp angles, from which it was removed with difficulty. Breakages which defaced the mould and spoiled the cast were frequent. After many unsuccessful efforts to induce type-founders to make types with square shoulders, the brothers undertook to make types for themselves. They began with type-making tools unprofitably used by the brothers Starr

BRUCE No. 16

CORRECTION of the construction or rhetoric of copy before it is given to the compositor is not a part of the duty of the master printer. On much of the copy sent to him are written these orders: "Follow copy; do not change capitals, italic, punctuation, or construction." Experience has warned him that it is hazardous to correct even where correction seems to be needed. He rightfully assumes that the copy of a new book is the work of a person who has prepared that copy properly. His estimate of the cost of composition is based on that belief, and this is also the belief and practice of all master printers. This estimate includes the proviso that changes subsequently made by the author in the proof must be regarded as alterations from copy.

There are authors who seldom change a word or point in proof, but there are others, educated and competent but unsystematic, who prepare copy negligently, with small regard for uniformity in the use of capitals, italic, points, quote-marks, etc. To follow their copy exactly would be to the joint disgrace of all concerned. Copy of this description, too often written and printed in haste, when it cannot be

Measurement in 12-pt. ems

revised by the author, should be corrected by some one *appointed by him*, before it is put in type, but the author is seldom willing to do or to have done this needed work. He does not see its utility. The faults that afterward seem so glaring in print may not be seen by him in his copy. Nothing is more deceptive than the written expression of thought; what seems proper in manuscript to-day, will seem improper in type to-morrow. There are few writers whose faculties are always in such exact working order that they never change the words first written. Changes are needed in almost every manuscript, but they are more economically made in a type-written copy before it is given to the printer. If changes are not made then, they must be made in the proof at increased expense.

Some copy contains the statement that it has been hastily prepared, and the printer is asked to correct negligences before it is put in type. This extra work is cheerfully done on short matter, but when manuscript is bulky, requiring hours for a revision, compliance with the request is impossible. When compositors are directed to correct copy in the processes of type-setting, their work may be unsatisfactory to the author. It should not be expected that two or more men can maintain the perfect uniformity of style that is desired.

LIGHT-FACE

HERE seems to be a gradual passing away of the recently revived fashion of types of black face and for compact composition in book work and in business pamphlets and circulars. It has been found by discerning buyers of printing that a round and clean cut of type of a light face and of unobtrusive shape is not so fatiguing to the eye as the more pretentious bold faces. The light-face is certainly much more attractive to the reader. When generously relieved by neat

Measurement in 12-point ems

CAPITALS	19
Lower-case	14½
1 2 3 4 5 6 7 8 9 0	

spacing between words and by wide leads between lines, this light-face with its clear outlines is much more readable than over-black types huddled together in a gloomy composition.

Durability is one of its merits. Its relatively wider space between the stems of each letter is not so quickly choked with ink when these stems have been somewhat flattened by wear. It is a serviceable letter for electrotyped advertisements that will get hard usage under press. Many merchants prefer this style for circular letters.

Of this font of 10-point Light-face we have six pairs of cases and one job case. It has been used with the best results in the printing of school-books and for novels of few words that have to be spread out to fill many pages. It is too fat a letter for poetry, for it compels the turn-over of lines.

10-point, old body. Farmer

The Text Types of the De Vinne Press

LIGHT-FACE

PROFESSIONAL MEN, and even men of business who wish to avoid in a concise circular the selection of bold type that conveys the idea of advertising ostentation, and are also equally dissatisfied with the feebleness and fussiness of ordinary typographic script and the commonplaceness of the common faces of roman and italic letter as made for books, find in this style of light-face the clearness and simplicity that they are looking for. Print from this type is visibly unlike that of the usual forms of roman and italic.

Like all broad-faced and open types, it needs for its neat presentation a proper background of white relief. If it is set solid with thin spaces between words and with a narrow margin, the effect so produced will be disappointing. For the ordinary page, double-leading is the treatment advised.

It will be of service for special paragraphs in pamphlets that require frequent change of type, but not of a face that overbears the needed lines of display.

What has been written on the previous page about the durability of electrotypes from this face may be repeated. A paragraph set up in ordinary faces of 6- or 8-point is liable to be worn and made almost unreadable when it has to be printed, as is often required, in a hurry and without proper make-ready on a cylinder machine. An electrotype plate from this face may have its lines thickened by rough treatment under press, but it will retain its legibility longer than it would if cast from ordinary roman text type.

Of this size we have five pairs of cases and one job case. There is no italic for this light-faced series. This font has only a few accents, but it has very clear figures that could be used with advantage as an aid to other fonts that have weak figures.

Useful in Advertisements

DR. JAVAL upholds type-founders in their practice of giving more width to the small letters of a text type with each decrease in the height or body of the type. A 10-point of good form has a lower-case alphabet of 18 of its own ems, but a 6-point of the same face must have an alphabet of 16 ems. If greater clearness is desired the letters must be made still wider, as is done in this font with a lower-case series of 19½ ems to the alphabet. The wider letter calls for wider spacing between words, more leads between lines, and generous margin around the page. The pleasing general effect of this light-faced letter is spoiled when its types are set solid and thin-spaced, and when they are printed on a leaf with a scamped margin. This style of letter is too wide to be recommended for poetry of long lines in a narrow measure, but for short bits of prose composition it will prove of good service, and will be relished by the reader. ¶ Of this font we have two pairs of cases and one job case, and two job cases of copper-faced letter.

CASLON OLD-STYLE

EVERY equipped book-printing house of the middle of the nineteenth century was supposed to have two faces of roman letter for the most used sizes of type. There was a bold face and a light face—perhaps a thin or a condensed face—but no face showed serious departure from the standard of form then generally observed. A difference of cut in a new style did not much change the structural form of the letter. Change was usually prompted by intent to give more of boldness or of lightness to the print. Not all of the new forms of type were needed; too many were the outcome of caprice. About the middle of the last century the trustee of a New England printing-house of high reputation, then in financial difficulties, reported that that house had seventeen distinct faces of Long-primer roman. It is difficult now to understand what need there ever could have been for so many faces when all were supposed to have been made from a common model on similar lines of construction. At the request of any publisher who admired a new face of type as shown in a type-founder's specimen sheet, the proprietor of that printing-house bought a font of the desired letter. Neither he nor the publisher seemed to foresee that the appearance of this new face must be seriously affected by changes that must be suffered in its appearance from a coarser texture of the paper selected, in the quality of printing-ink, or in varying conditions of presswork. This want of foresight was a misfortune. The new face that was pleasing on hot-pressed paper in a carefully supervised type-founder's specimen book was sure to present an inferior impression when it had been hurriedly printed, as was customary, on paper made for ordinary news or cheap book work. To the book-buyer the new face was not always an improvement. Many preferred old types as more distinct and readable.

It is a mistake to assume that a new face entirely different from any other must make a new book acceptable and more salable. Its success depends more on the choice of suitable paper and the aid of an expert pressman who has pride in good work. If half the money spent during the last century on the cutting and casting of new styles of roman letter had been paid for a superior quality of paper and a higher grade of presswork, our American books of that period would have been more prized by readers, even when printed from old types. ¶ Of this font we have one job case.

OLD-STYLE TYPE was practically out of fashion in 1800, and Charles Whittingham (the uncle) seems to have been the last London printer to abandon its use. It was soon after despised by publishers, readers, and book reviewers as an angular, old-fashioned type, not to be preferred, as was vainly tried, to the rounder forms then in favor. It was condemned as entirely unsuitable for any book of merit and in every way inferior to the graceful types of France and Italy. Connoisseurs of that time did not unite on any style of letter as the model of good form, although thick and thin, black and light faces were then produced by type-founders in profusion. William Pickering, a publisher of London, unable to find from his printer Charles Whittingham (the nephew) the type that he desired for a proposed book in old dress, went with him, about the year 1843, to the Caslon type-foundry, and induced the proprietors to take out of their vault the Old-style matrices made by the first William Caslon about the year 1732. The face selected was Great-primer or 18-point; the book to be printed was "So much of the *DIARY* of LADY WILLOUGHBY as Relates to her *Domestic History*, & to the Eventful Period of the Reign of CHARLES the First. . Imprinted for LONGMAN, BROWN, GREEN & LONGMANS, Paternoster Row, over against *Warwick Lane*, in the City of London. 1844." The font so cast contained the long *f*, with all its doublets, and every other peculiarity of the time. Proper names and their synonyms were also in italic, and capitals were freely used for nouns and verbs. In this book of 1844 we may note the beginning of the present profligate use of italic as an affectation of quaintness in places where it is not needed. Will any one explain why italic, once used with some propriety as an emphasizing letter for words of real or supposed importance, should now be selected for trivial particles that need no distinction?

CASLON OLD-STYLE

CASLON I made his Old-style type in series from pearl to six-line pica, and all sizes showed mutual relationship. Sizes from great-primer to six-line pica are admirable even now for their remarkable legibility, but small sizes, from pica to nonpareil, do not deserve unqualified commendation. Minute examination will show that all sizes were unwisely cut in a geometrical proportion. The

reducing instrument that we now call the pentagraph was unknown to Caslon, but he must have reduced his sizes geometrically by the aid of reducing-glass. His types of nonpareil are strictly in proportion with his types of pica—the alphabet of 26 letters in each size (as he cast them) contained the same number of ems of its own body. Type-founders now give to the smaller sizes a wider set, but a Caslon nonpareil or brevier of modern casting is still a lean letter, disliked by compositors and by the average reader of print as condensed, huddled, somewhat obscure, and a strain on the eyesight. It has to be used by book-printers as the proper letter for

foot- and side-notes or in the index or appendix to a Caslon text of larger size, but it is accepted unwillingly even by the admirers of Old-style letter. Its out-of-line arabic figures are especially objectionable in table work, for they interfere with one another in different lines of composition. ¶ Of this font we have three pairs of cases and one job case for roman, one job case for italic, and one for accents.

9-point No. 71. A. T. F. Co.

THE geometrical reduction of type so that each size shall be in true proportion with other sizes is contrary to the teachings of optics and to the practice of type-founding. It is well understood by all type-founders that each size of letter must be made increasingly wider with every decrease in its height. The great-primer of the “Diary of Lady Willoughby” is a

Measurement in 12-point ems

readable letter, but the nonpareil and brevier made by Caslon are not so readable. They seem huddled and confused in composition, not from ignorance or carelessness, but from an unwise adherence to geometrical proportion.

Here it may be remarked that, contrary to the teachings of some modern reformers of typography, Pickering and Whittingham did not give solid composition to the “Diary of Lady Willoughby.” Its lines are widely leaded, and the composition was made more readable by this leading. Solid composition is at its best when the type selected gives a

perceptible lane of white space between its lines. This 10-point was used by the De Vinne Press for Messrs. Crowell & Co.’s reprint in 12mo form of the first folio of Shakspeare. ¶ Of this font we have seven pairs and two job cases for roman, two job cases for italic, and two accent cases.

10-point No. 71. A. T. F. Co.

The Text Types of the De Vinne Press

CASLON OLD-STYLE

COMPOSITORS serve two masters: the buyer who orders the work and has the right to direct its style, and the master printer, who is responsible to that buyer and to the reader for the workmanship of the composition. The buyer rightfully expects the compositor to correct indefensible negligences in his written copy, and to arrange types in a tasteful manner. The master also requires the compositor to produce workmanship in good taste.

Here comes occasion for possible disagreement. Types selected by the buyer (or even by the master printer) may be composed as directed and yet not produce the good work desired. Types are inflexible; they must occupy a fixed space, and they may not mate tastefully one with another. The arrangement of types intended by either party must be modified to some extent by the compositor.

Good taste is not one of the exact sciences. It has few absolute rules. What is tasteful in one composition is not in another. What is pleasing to the author may not be pleasing to the master printer. The compositor's notion of good taste may differ, and the three parties may be at complete variance.

Good taste should be understood as a synonym for propriety. It means order, symmetry, and the observance of seemly arrangements that have the sanction of age and authority. In type-setting it means the putting of right types in right places. It does not mean departure from methods that have commanded general respect. Composition is but the architecture of words, and it must be governed by general rules of law and order that are observed not only in architecture but in every kind of worthy construction.

Positive directions from the writer of the copy must be obeyed, but when the compositor has a free hand he can safely disregard popular fads and fashions and arrange types to suit the intent of the writer. He will not try to improve the supposed graces of a new style of type, or to add to the eccentricities of a designer or engraver, or even to show his own skill as an original combiner of odd bits of typographic building material. He will try to keep the author or writer at the front always. If he does the work by easy and simple methods, it is more than probable his composition will be approved as in good taste.

CASLON OLD-STYLE

ENGLISH PRINTERS of the seventeenth century bought their choice types from founders of Holland, who grudgingly supplied their rivals in London with type-making materials. In his "Mechanick Exercises" of 1683, Moxon commends Van Dijk of Amsterdam as a prince of letter designers, and the tracings that he gives of Van Dijk's model letters justify the praise. The best English books of this period were printed from types that had been cut

in Holland or cast in England from Dutch matrices, for England had no punch-cutter of merit when William Caslon began as type-founder in 1720.

England did have its share of petty founders, who cast obsolete designs from worn moulds and carelessly fitted matrices. The capitals of fonts of type then offered as new may have been cut a

century before by one punch-cutter, the lower-case series (that did not fairly mate with the capitals) by another, while the italic was the product of a third incompetent. Types so constructed made sorry show in print; they were unequal in height and out of line. The University Press of Oxford, England, which once cast all its types, preserves as curiosities many fonts of types of differing heights to paper.

There is a somewhat similar face of Pica, known as No. 15, on the opposite page, which shows the mixing of two series. ¶ *Of this font we have ten pairs of cases for roman, one pair and one job case for italic, and one for accents.*

CASLON OLD-STYLE

CASLON I and his successors had to make, at the request of fastidious buyers, changes from the original design. In the specimens as printed by Luckombe in his "History of Printing" of 1776, the critical reader has to note a No. 1 and No. 2 face. In the authorized Caslon Specimen Book of 1796, beautifully printed by Charles Whittingham, one notes also a No. 3 face, and others described as New. It is plain that the Caslon Foundry had been persuaded to make changes in the earliest forms. There is then a thin and angular Caslon style in fashion during the first half of the eighteenth century and a rounder Caslon style preferred at the close of that century, but each style is from the Caslon Foundry. The word Caslon, as applied to a distinct face of type, is consequently not exactly descriptive; it may be somewhat misleading.

Caslon's faces were closely copied by Wilson and other founders. When Old-style was revived, the disused matrices were reassembled, but not always with discretion. The type of this page, with capitals too thick for its lower-case, seems to be the work of two punch-cutters, each aiming at a different end. This face was put out of service for many years in this house, but after long neglect it met with warm approval when used for the printing of Scribner's limited edition of the writings of Rudyard Kipling in many volumes of octavo form. ¶ *Of this font we have eight pairs of cases for roman, and one pair and a job case for italic.*

12-point Old-style No. 15. A. T. F. Co.

The Text Types of the De Vinne Press

CASLON OLD-STYLE

REVIVED Old-style had to face dislike. Some book reviewers denounced it as a relapse to the crudity of Puritan printing; others hailed it as a return to dignity and simplicity. Much could be said in support of each belief. The reading public of 1850, wearied with the effeminacy fostered by engravers and type-founders in their preference for sharp lines, was ready for masculine strength.

Unfortunately, no line of distinction was drawn between the strong and the weak features of the Old-style. Was there any need for the profuse peppering of matter with prepositions and articles in italic?

Measurement in 12-point ems

Á À É È Ç Ñ	Á É Õ
á à â ä å é ê ë ì í î ï ö ö ú û ü û ç ñ	

Critics who admitted its good features said Old-style had defects. The lower-case a e s, and, indeed, all characters that had a central cross-stroke, were pinched and

feeble. Capital letters were not in proportion. Arabic figures seemed absurdly out of proportion when used in a line of capital letters. The æ and the long f with its doublets had been out of use for about fifty years.

This face was used for the reprint of Moxon's "*Mechanick Exercises,*" ordered by the *Typothetæ of New York*. ¶ *Of this font we have ten pairs of cases for roman, two for italic, and one accent case. Has joined letters.*

CASLON OLD-STYLE

WILLIAM CASLON secured the legibility of the larger sizes of his Old-style by providing a generous relief of white space between lines of solid composition. His faces were not too large for their bodies. Round and small letters like o and e are in the centre, or nearly in the centre, of the body. Descending strokes below the line, as in g and p, are of about the same length as ascending strokes in d and b.

Capitals of this 18-point are apparently but little taller than those of a modern 14-point type. Caslon

Measurement in 12-pt. ems

Capitals 24¹/₂

Italic lower-case . . 15

saw need for a visible lane of white space between meeting lines of solid letter, for in his time printers made sparing use of leads. This added relief of white between the lines prevented the use of leads. Amateurs in typography who now prefer types set solid overlook the greater height of modern round letters that almost compels the use of leads.

¶ *Of 18-point we have two pairs of cases for roman and one for italic; of Great-primer No. 15 we have three pairs of cases for roman.*

18-point No. 71. A. T. F. Co.

CASLON OLD-STYLE

CASLON'S LOWER-CASE round letters were thin in width as well as very low in height. A letter upon a large body could properly be presented on a relatively small page. Even-spacing was then possible with 18-point on the small octavo that is

Measurement in 12-pt. ems

Capitals 30¹/₂

Small capitals . . . 21

Lower-case 19

Italic capitals . . . 32³/₄

Italic lower-case . . 17¹/₃

now not practicable on the modern cut of that size. To secure even lining to faces of un-

like style, round letters are now cut on a lower line, which makes descenders very short, and ascenders and capitals much taller. Experiments in a lower placing of round letters on the body to make a series more serviceable for job work are not always of benefit in book work. ¶ *Of this font we have two pairs of cases for roman and one for italic. No accents.*

CASLON OLD-STYLE

LEGIBILITY was also increased by the greater protraction of the thick stroke of each letter and by the increased thickness of the hair-line, which was made shorter in all curved lines so as to give more length to the longer thick stroke.

XV CENTURY

THE OLDEST TYPES are not the rudest. Not all the old makers of type were careless; they found excellent models of lettering in old books, and they knew that the readers of their own time would insist on fair workmanship in printing. Some of the types of the early printers of Italy and France are justly admired by type-founders and bibliophiles of our time.

ARLINGTON

ARLINGTON is another form of invented Old-style made by the American Type Foundry at St. Louis, Mo., for more show in advertisements. Its lower-case is taller and bolder than a similar body of the Fifteenth Century type and it is more condensed, but its figures are made to line according to modern usage. It is attractive in an advertisement, but does not appear to advantage when mixed with the faces of approved Old-style upon a title-page.

MODERNIZED OLD-STYLE. No. 20

The Merits of Old-Style

OLD-STYLE TYPE is often commended for its superior legibility, but the features that give to it this claimed legibility, not always clearly understood, may need an explanation. In the old-style, the so-called hair-line is short and has a visible width, and the thick stroke has more extension before it tapers to the hair-line. Each character is constructed so that all its lines can be seen at first glance. In modern cuts of type the hair-line is long and sharp, tending to invisibility, while the thick stroke is correspondingly shortened. In the old-style, the serifs at the end of the thick and thin strokes are short, stubby, and angular; in the modern, they are longer, lighter, and more gracefully curved or bracketed to the thick stroke. The general effect of old-style is that of angularity. Smooth curves and graceful tapers are not desired. On the contrary, the general effect of a modern face is that of roundness, precision, and symmetry. Each character of a properly cut modern letter is exact and carefully finished in all its details; but when its letters are seen with its mates in a mass of composed types, its high finish does not seem a merit. A letter of modern cut is seldom so distinct as the same letter in a type of old-style of the same size.

The greater distinctness of the old-style can be proved by experiment. Select two equally well-printed pages of large type—one of old-style and one of modern cut of the same size and about the same thickness of face. Place them in a favorable light; then

moving away from these contrasted examples note how much sooner the modern types become indistinct.

Yet the superior legibility of the old-style will be evident only in 12-point or larger sizes. In sizes smaller than 12-point the old-style face will not be any clearer; the 8- and 6-point size may not be so distinct as 8- and 6-point of modern type. The diminished legibility of the smaller sizes is the result of a wrong practice of early English type-founders who made smaller types in exactly the same proportion as they made the larger types. The modern practice, commended by opticians, is to give increased width to each letter with every decrease in the height of its body.

5-point. Bruce.

The Defects of Modern Style

THE DESIGNERS of old and new shapes of roman letter did their work on different lines. The old designer gave to supposed needs of the reader of large type his first consideration. He would make types graceful if he could, but he thought it more important to make them distinct in all the combinations of composition. His first object was to design letters that should be readable.

The designer of modern type thinks it his first duty to make each letter "artistic" or of graceful shape, but his notion of grace is largely mechanical. He thinks of each letter as a unit, and not of many letters in a mass. The hair-line must be sharp and tend to invisibility as it does in copperplate engraving; the curving thick stroke must dwindle to its hair-line with a faultless taper; the slender serif must be neatly bracketed to its thick stroke. Every line, curve, or angle is mechanically correct, but the general effect of letters so devised when they have been combined in a composition of types is that

of overwrought refinement. To use the painter's phrase, the letter so treated is "niggled" or overdone. Without intending to do so, the designer has been more intent on showing his own skill than in aiding the reader of print. Letters that appear symmetrical

MODERNIZED OLD-STYLE. No. 20

IT DOES NOT FOLLOW that old-style letter is the perfection of design or engraving. Some letters are too thin, as in the lower-case a, e, s; others again, as o, c, d, q, like the rounder letters of the capitals, are disproportionately wide. In most of the recently made variations of old-style these faults have been corrected. The great defect of modern-cut letter is the length, sharpness, and delicacy of hair-line and serif. When hair-line strokes of modern-cut types are made visibly wider, print therefrom is to that extent made more readable. Some of the angular features of old-style can be preserved without damage to its readability and effectiveness in the composition.

During the eighteenth century there were a few inexpert type-founders who made old-style type of bad proportions. Searchers after novelty who have accidentally encountered these types in old books have had them recut in type, not from a perception of real merit, but from a desire to put before the modern reader letters that were supposed to have the charm of irregularity added to that of quaintness. Admirers of the old-style character are misled when they accept the mean workmanship of inexperts as models of good form. ¶ *Of Minion we have eleven pairs of cases for roman, one pair and two job cases for italic, and two cases for accents.*

7-point, old body. Bruce

BODONI of Italy was the first notable type-founder who broke from subservience to the rules laid down by Dürer and then observed by type-makers of all countries. The models of Tory of Paris and of Van Dijk of Amsterdam (who had supplemented Dürer's teachings) had been accepted everywhere as the standards of good form. William Caslon, type-founder of London, in 1735 gave increased precision to these old forms, but he fairly preserved the old model.

Types then made might be thick or thin, bold or light, but the angularity of structural lines was always the same. It was seldom that any punch-cutter attempted change. As far back as 1732, Fleischman, the letter-engraver for the Enschedé Foundry of Holland, gave more roundness to the round letters of the lower-case, but his teachings found no imitative pupil. Bodoni of Italy was more successful. He increased the roundness suggested by Fleischman, lengthened the ascending and descending strokes, extended serifs, put more white space between the lines, and thereby gave improved readability to his types. Treading closely on his heels in the path of reform came François-Ambroise Didot of Paris. The new models so made in Italy and France were imitated

or altered by founders abroad as well as here, and attempts at change produced a bewildering variety of styles, but all founders avoided angularity, and preferred round forms and sharp hair-lines. ¶ *Of Brevier we have twenty-five pairs of cases for roman, four job cases for italic, and two cases for accents; of 8-point we have fifteen pairs of cases for roman, two job cases for italic, and one case for accents.*

MODERNIZED OLD-STYLE. No. 20

ATTEMPTS TO REPRODUCE the fine hair-lines or fading stipple of lithography or copperplate, meritorious as they seem in other forms of engraving, are not so practicable with types. Profusely shaded and ornamented letters, type-metal flourishes, and overworked borders are decorations of the past. Modern taste is thoroughly masculine. The feminine feature of delicacy, with its unavoidable feebleness, is disregarded. Readers want strength and simplicity.

Letter-press printing is strong enough to stand on its own feet, and to uphold stoutly the methods that have earned it honorable distinction. Its merit is in its simplicity, symmetry, and readability. It is at its best when it carefully avoids the effects easily produced by its rivals. The preciseness and uniformity of the type-printed page, inartistic as they may seem to the amateur, are the features that give merit

to the book and pleasure to the reader. The irregularities shown by the artistic designer in his construction and combination of letters may be pleasing on one page—perhaps in a dozen pages—but they are disliked when offered in greater quantity. Books of engraved letters are objected to not for greater cost, but for offence at the designer's intent to usurp more attention than the writer. ¶ *Of Pica we have eleven pairs of cases for roman, two pairs and two job cases for italic, and one case for accents.*

MODERNIZED OLD-STYLE. No. 20

JOHN PINE of London published (1733-1737) a remarkable edition of HORACE in two octavo volumes. He began intending to print a book of superior typography, but met obstacles. The book was to be profusely illustrated, but printers from types could not print woodcuts with the delicacy he desired and give fit blackness to letters. He had the text set up in types and spaced to fit the illustrations. A proof of the composed type was transferred to the plate, and it was engraved and printed with the illustrations. So treated, the letters were beyond correction afterward. Lowndes says it was "remarkable more for the beauty of the engraving than for the accuracy of its text." This was the last notable attempt at printing a classic text from transferred type by copperplate process, and it was not financially successful. Readers then and afterward preferred engraving for the illustrations and types direct for the text. ¶ *Of English we have four pairs of cases for roman, one pair and one job case for italic, and one case for accents; of 14-point we have four pairs of cases for roman.*

COMPOSITION from types offers advantages to a writer that are not fully valued. Faults in spelling or in the arrangement of words can be corrected with facility. The blanks or spaces between lines can be readily re-adjusted. A page can be made long or short by putting in or taking out leads. The line that seems too short in proof can be spaced between letters to the desired width, or it can be reset in a type of larger size. The lop-sided line can be centred and types of single letters can be moved about at will in almost any position. THIS EXTREMELY USEFUL FREEDOM IN THE MOVEMENT OF LETTERS OR FIGURES in type work is not practicable in any other branch of the graphic arts. *¶ Of this font we have three pairs of cases for roman, one job case for italic, and one case for accents.*

CHELTENHAM OLD-STYLE

COMPOSITION IS MADE MORE PLEASING when the spaces between words seem to be of the same width in all lines on the page. A reader is repelled by print in which words have been separated, as they may be occasionally, by two three-to-em spaces in the first line and by five-to-em spaces in the next line. Quite as unsightly are lines that have been thick-spaced at one side and thin-spaced at the other. Spacing of either kind is a disgrace to the printer; it is a fault for which there is seldom acceptable excuse. ¶ Of this size of Cheltenham we have one pair and two job cases.

Measurement in 12-pt. ems
 CAPITALS . . . 15³/₄
 Lower-case . . . 9
 1234567890 ¶ Qustc' "

10-point. A. T. F. Co.

NOTE the large size of the capital letters, which have been so produced by putting the base-line of all the letters upon a lower level. The few letters that go below this base-line, as in j, g, p, q, y, are unusually short. The space gained by this shortening is used to increase the height of the capitals and all ascending letters. The serifs are short and stubby. The so-called hair-line has a visible width.

**OLD
 Style**

A USEFUL type for job work in any form of printing that calls for a letter of marked thinness, that does not show loss in its readability from compression. Many old-style features have been preserved: the joined letters st and ct, and the quaintness of early arabic figures.

CAPITALS . . . 10³/₄

CONDENSED LETTER should be thin-spaced invariably. The proper space between words in any type is fairly indicated by the blanks between the stems of the letters m and n of that type, which will be wide in fat and narrow in lean types, and should be a safe guide for the determination of correct spacing. ¶ Of this size we have two job cases.

CHELTENHAM OLD-STYLE

LD-STYLE features are more pronounced in the capitals of Cheltenham than in its lower-case. The critical reader misses the stiffness and angularity of many of the characters in the older Caslon style. These capitals can be used with consistency for two-line letters with modernized old-style or real old-style when letters of proper height for these older styles are not to be had.

Cheltenham is not to be recommended for open display in combination with lines that have been set in any of the modernized forms of old-style that have thinner hair-lines. Yet a title-page exclusively in this face of type will be pleasing and consistent before a pamphlet or a text set in any face of old-style. It has lightness enough even for the Elzevir or Cadmus letters, and blackness enough to usher in properly the XV Century or Bradford style.

Advertisers and publishers of illustrated catalogues have received the Cheltenham with marked favor, for it combines the extreme of compactness with great clearness. More matter can be put with legibility in a small space than in the more generally accepted form of roman letter. It is approved by job printers as a neat style for circulars and pamphlets, but it has not, as yet, any popularity as a text letter for the standard books of publishers. ¶ Of this face we have two pairs and two job cases.

THE TITLE-PAGE

has very few types, but
its proper arrangement
requires some thought

36-point. A. T. F. Co.
Capitals 50¹/₂ Lower-case 28³/₄

THE TYPE OF THE TITLE should be of the same face as that of the text. This is easier said than done, for there are few text types provided with larger sizes of precisely the same face and fitted for words and lines of different length. The compositor must do the best he can with the faces and styles that are available, but he must avoid harsh contrasts. He should understand at the outset that his composition will be most satisfactory when the types selected show mutual relation.

A title-page may be entirely in capitals or entirely in lower-case (initial letters excepted), either in roman or italic, but two series can seldom be used together.

Measurement in 12-pt. ems

CAPITALS . 18
Lower-case . . 10¹/₄
1234567890 ¶ § ¢ ' "

Written copy for the title-page matter should be studied before the first line is put in type. The compositor should predetermine how many lines and how much blank between lines are really needed. He should begin by sketching on a bit of paper the relative size and length of the proposed lines. The first lesson to be learned by him is, that the attractiveness of a title-page depends as much upon the proper distribution of white space as on the proper display of important words.

12-point. A. T. F. Co.

SPACING

60-point. A. T. F. Co.

Capitals 85

A YOUNG COMPOSITOR should read over every line as soon as he sets it, and at once correct any error in type or spacing. Before he empties the matter on the galley he should read it again, looking for outs and doublets. The time given to correction in the stick is not time lost. It is easier to correct there than on the galley or stone, and it is worth a deal of trouble to acquire the reputation of a clean compositor.

Capitals 63³/₄

 WHY should the running title of a few letters, or even those of a title-page, be dislocated with very broad spaces between letters to make the line fill the measure? This explosive treatment is not practised in short lines of poetry or in dialogue matter. It does not make the page more symmetrical or the intent of words any clearer. It does confuse the reader.

ELZEVIR OR CADMUS

THIS ITALIC, WITH ITS STUBBY SERIFS, CLOSE-FITTING AND THICKER LINES, IS ESPECIALLY FIT FOR ELECTRO-TYPED STAMPS OF BOOKBINDERS, AND FOR APPLICATION IN WHICH COMMON SMALL CAPITALS ARE EXPOSED TO SEVERE IMPRESSION AND SOON WEAR. SWASH LETTERS SHOULD NOT MEET.

THIS LETTER IS OF SERVICE FOR THE CATCH-LINES IN SMALL TITLE-PAGES SET IN ELZEVIR, OR FOR TWO OR MORE COLUMNS OF PROPER NAMES ARRANGED IN TABULAR FORM.

THIS SMALL FONT OF CAPITALS AND SMALL CAPITALS ONLY, WITHOUT LOWER-CASE SORTS, WAS BOUGHT AS THE PROPER MATE FOR THE ELZEVIR TWO-LINE FACES SHOWN ON ANOTHER PAGE.

Capitals . 9¹/₂ Small capitals . 7¹/₂ Italic capitals . 9¹/₂

Of this font we have two job cases for roman capitals and one job case for italic capitals.

6-point Elzevir. Mayeur

Who designed this face?

ELZEVIR is a name unwisely chosen, for this face is not at all like the Van Dijk faces largely used by the famous printers of Holland. Who, then, did design it? Didot ("Essai sur la Typographie," p. 699) says that Garamond and Sanlecque made types for the Elzevirs. An Italian authority ("Tipo Italiano non Elzeviriano," appunti di B. L. Centenari, Rome, 1879) intimates that the Elzevirs were provided with some Italian types. The author gives us no satisfactory evidence in support of this intimation, and Willems ridicules it, but it must be admitted that this so-called Elzevir letter has features unlike those of any seventeenth-century face made in France or Holland.

This face was revived in 1878 by Gustave Mayeur of Paris, who says that he selected for his model the types of a book printed in 1634 by the Elzevirs of Leyden. It is a compressed letter, with a large open face, short ascenders and descenders, and thin stems, plainly made to withstand wear, for its few hair-lines are thick and the serifs are short and stubby. Although fitted with unusual closeness it is a readable letter, and popular, not only with publishers and authors, but with job printers. Its durable two-line letters make it especially valuable for book titles and open display. ¶ Of this font we have four pairs of cases for roman, one pair of cases for italic, and one case for accents.

12-point Cadmus. Farmer

ELZEVIR OR CADMUS

RENCH Body 14 of the so-called Elzevir face, in a more marked manner by reason of its larger size, shows all the peculiarities previously noted in the 12-point Cadmus. It seems almost as large and quite as distinct as modernized old-style on 18-point body. Composition in all forms of Cadmus or Elzevir face is much improved when it has been leaded. Note also that there are swash letters to the italic, and two forms of arabic figures, one for roman and one for italic, and a very large provision of accents. It also has in its italic series the conjoined letters *QU*, *Qu*, *as*, *es*, *is*, *us*, *et*, *ll*, and *sp*. They are not at all fantastic in form, but they give an acceptable alternation to plain composition.

Measurement in 12-point ems

Capitals and small capitals of the Cadmus and Elzevir style may be used with advantage in the catch-lines or the minor lines of display in title-pages that have been ordered in two-line letters of Elzevir. ¶ *Of this body we have three pairs of cases for roman, one and one-half pairs for italic, and two accent cases.*

14-point Elzevir. Mayeur

ELZEVIR OR CADMUS

THIS small font from the Central Type Foundry of St. Louis was bought to fill a gap in the sizes of capitals of the two-line Elzevir. It has no small capitals and no italic. In all composition from Cadmus, Elzevir, or French Old-style note the extreme lightness, thinness, and openness of all the characters. These are desirable qualities in a proper place, but the selection of this style in combination with types of modern form and of bolder face should be avoided. When capitals only are used it will be judicious to hair-space the letters that fit too closely. ¶ Of this face we have one job case only.

20-point French Old-style. C. T. F.
Capitals 31¹/₂ Lower-case 21³/₄

The Text Types of the De Vinne Press

RENNER

RENNER FACE appears to best advantage in the **ELIZABETHAN SHAKSPERE** edited and annotated by Mark Harvey Liddell. The first volume, *Macbeth*, was published in 1902 by Doubleday, Page & Company, in the form of a medium quarto (leaf 9 by 12 inches), on Van Gelder paper. The text was set in 14-point, with notes in 10-point that enclosed the text on three sides, after a fashion that was generally observed by many printers of the fifteenth century in the printing of texts that called for much comment. The preface of this **ELIZABETHAN SHAKSPERE** was in italic of 14-point.

The decorative initial letters were those of Erhard Ratdolt of Venice, and are partially shown on page 48 of this book.

This 10-point is a fair reduction of the 14-point, but there is a trifle more of boldness in the lines, as seemed desirable for the body of smaller size. One of the peculiarities of this Renner face is the enlarged height and width of small

Measurement in 12-point ems

capitals. In most fonts of roman letter the small capitals are not higher than the round letter of the lower-case, and they are always so closely fitted that their hair-spacing is often needed. This compactness makes them insignificant even for catch-lines, and useless for types of display. In this face we have increased height, more width, and greater readability. Arabic figures have old-style features, but they are made to line with one another. Signs for paragraphs are sufficiently distinct, but do not have the blotchy appearance of the old forms. There are no catch-words at the foot of each page or joined letters, yet the page retains a distinct old-style appearance. ¶ *Of this face we have six pairs of cases for roman, one pair of cases and one job case for italic, and one case for accents.*

10-point. Bruce

RANZ RENNER of Hailbrun, Germany, was the sixth printer of Venice, in which city he practised his art with success between the years 1470 and 1494. He found there the brothers de Speyer and Nicolas Jenson, rivals of great ability, who were trying to please Italian readers with new roman types. Renner was moved to emulation, and gave to his readers a roman letter of much lighter face than those of his competitors. It had some crudities but much merit.

The type of this page was remodelled on that of Renner's "Quadragesimale" of 1472. In 1899 it was recut for the service of the De Vinne Press, to meet the wishes of buyers who objected to the thinness of modernized old-style.

The legibility of printing does not depend so much upon a type of thick lines as it does on the clearness and instant visibility of every line in every character. To this end the hair-lines of this style were made firmer and thin letters were widened. Old rules were observed. Short letters occupy but about one third of the body and ascenders and descenders are of equal length. This treatment gives the white space between lines that is needed for easy reading.

This modernized Renner type, first used in 1900 by the Grolier Club of the City of New York for the printing of a limited edition of Boccaccio's *Life of Dante*, has since been employed in many other books of importance. ¶ *Of this face we have five pairs of cases for roman and one pair for italic.*

RENNER BOLD-FACE

USEFUL AS IT MAY BE in words that really require a distinctive letter within a text of roman, italic has the defect of insufficient boldness. It makes a weak side-heading when in type of the same size as the text letter. Advertisers object to it as giving but feeble

emphasis to words marked within a paragraph. In dictionaries and other works of like nature that need at the beginning of every paragraph a letter intended to arrest attention at first glance, a bolder face of type is a real need. The fat-faced title type that was preferred for

Measurement in 12-pt. ems

CAPITALS 22¹/₂

Lower-case 13¹/₄

1 2 3 4 5 6 7 8 9 0

subheadings is out of favor. It is now required that the bold type for a sub- or side-heading of this class shall have the same peculiarities as the type of the text. For this purpose the Bold-faced Renner was made, but it has been used with advantage in the selected paragraphs of circulars and pamphlets that seem to require special distinction without any parade of bold display. Pamphlets that need a text-type of old-style shape will find this Renner a most useful letter. ¶ Of this face we have two pairs of cases for roman. It has no small capitals, italic, or accents.

14-point. Bruce

The Text Types of the De Vinne Press

RENNER

ITALIC as the running mate to roman type was unknown to Renner or to any printer of the fifteenth century, for it was first made and used by Aldus Manutius in 1500. Emphatic words within the text in types of entirely different form were not then called for.

To distinguish words intended to carry emphasis, the De Vinne Press was induced to have made for that house a new series of Renner roman letter with dots under each character. In so doing it followed

Measurement in 12-point ems
CAPITALS. 20³/₄
Lower-case . . 12³/₄
I 2 3 4 5 6 7 8 9 0

the example set by the London type-founder, Jackson, who used dotted letters instead of italic for words of distinction in the grand edition of the Macklin Bible in

seven folio volumes. For there were then and are now critical readers who maintain that a mixing in the same line of an upright and a slanting letter is an offence against good order and good taste.

These critics are in the minority; a larger number of readers insist on italic as a character needed for emphasis. The italic letter here shown is not that of Renner, but an adaptation, to which the peculiarities of the Renner roman, and other old-style features like swash-letter capitals, have been transferred.

This italic is preferred by many readers as a text letter to show the supposed needed change of style in prefaces or circulars. It is not a type of bold display, but it is as readable as the roman, and more distinct than many other forms of inclined letter.

¶ Of this face we have one pair of cases.

RENNER

A TWO-LINE LETTER WITH WIDE FIGURES

Capitals 40 $\frac{3}{4}$
20-point. Bruce

WIXTEEN-POINT is a type seldom selected now for the text of any book, yet it was once the preferred size for all Folios and large Quartos. Its large letters aided easy reading, but greater largeness of type rarely made an ordinary book unduly thick. This 16-point Renner is broad and is not recommended for measures of less than 30 ems of pica. For a thinner type on 16-point body, see page 161.

Capitals 31 Lower-case 18 $\frac{1}{2}$
16-point. Bruce

THIS font of Renner or 8-point body is in small supply, and should not be selected for a verbose circular or as the text letter of a pamphlet or book. It will find its best field of service in the composition of sub-headings or for the side or foot-notes to Renner pages in longer type. It mates well with Bradford, MacFarland, Ancient Roman, and even with Cushing Monotone, and will be serviceable in the catch lines for these faces.

Legibility first, Decoration last

PRINTING, in its early days, was a masculine art. The value of the printed book was in its readability. The types used might be large or small, thick or thin, but they were always distinct. There were thin and thick strokes in the many forms of letter then in use, but the thicker stroke was always protracted, and the thin stroke always of a perceptible width. Knowing well they could not compete with skilled copyists in refinements of decoration, the old printers wisely gave their best efforts toward making print plain. The change that came with the new method of engraving on wood, in its imitation of copperplate delicacy, was damaging to typography.

CENTURY EXPANDED

A Pleasing Face in A TITLE-PAGE as Capitals or in its Lower-case series.

Capitals 54 Lower-case 38²/₃
36-point. A. T. F. Co.

THE TWO-LINE TYPES chosen for books by the printer may show a sad disagreement of face. Some are obese, others lean ; some with thicker and others with thinner stems ; some have flat and extended, and others very short and bracketed, serifs. That series is rated as complete which embraces all the regular bodies from two-line diamond to two-line great-primer, but every compositor soon finds that these are not sufficient. He needs intermediate sizes : capitals that are smaller and two-lines larger than any in the series. He has to make use of the capitals of the ordinary text types, to two-lines of other series, to condensed faces, to italic capitals and black-letter. ¶ Of this font we have one job case.

8-point. A. T. F. Co.

A TITLE composed with incongruous faces is always displeasing. The author is usually quick to notice discord, but he has not the technical knowledge that enables him to detect its true cause. He imputes the discord, not always rightfully, to the bad taste of the compositor, when oftener it should be imputed to a scant supply of sizes and the incongruity of faces. Some publishers have been so annoyed by the wide gaps between existing sizes of two-line letter, and the incongruity of any substituted face, that they have ordered special lines and occasionally the entire title to be engraved — too frequently, it must be admitted, without improvement. Others have ordered a title for a text in modern-cut to be set either in the Elzevir or the Caslon old-style, which appear to be the styles most available, and with a fairly acceptable grading of sizes. The impropriety of a title in old-style before a text in modern-cut is foreseen and deplored, but it seems a fault not so offensive as the mixing of unrelated two-lines on the same title-page. ¶ Of this font we have one job case.

CENTURY EXPANDED

DESIGNING a new face of type, to be based on the old-style model so as to show apparent evidence of its age, too often begins with the wrong notion that rudeness must be its strong feature. It is assumed that the old type-makers were careless in drawing, as well as unskilled in engraving. It is supposed that some degree of slovenliness will be of service in making a newly created type conform to the spirit of old time. The ruder the type the greater its probable age. Types of the seventeenth century; types of the fifteenth century must be constructed to show an ignorance of or indifference to the established rules of proportion and symmetry that had been observed by the writers of good manuscript books before the invention of types, and ever afterward by engravers and designers of letters.

There is no warrant for this belief. A book reviewer of authority has said that "The first book is better than the last," and that Gutenberg's Bible of Forty-two Lines still remains the model of a well-made book. Not every one will assent to this enthusiastic dogmatism, but all printers will agree that this Bible has a rightful place in the front rank of fine books. ¶ *Of this face we have one pair of cases for roman, one pair for italic, and one job case for accents.*

9-point. A. T. F. Co.

ORDINARY care was shown in the designing and engraving of early types; the qualified readers of that period did not tolerate slovenly type and printing.

There were then and have been ever since enough of slovens in the making of types, but much of the inferior early work has disappeared and is forgotten. It was properly condemned as rubbish by the readers of the following centuries. But few failures survive. I have one before me, Dr. John Scott on the Four Books of Sentences, printed by Windelin de Speyer at Venice in 1475.

Its carelessly drawn letters were not properly adjusted on the matrices; its types were consequently printed out of line, and they present a most displeasing appearance in spite of its decent presswork, but there is no evidence known to me that this type was ever used again in any other work. ¶ *Of this somewhat thin face we have one pair of cases for the roman, one pair for the italic, and one job case for accents.*

CENTURY EXPANDED

THIS CENTURY EXPANDED FACE was planned to make a more readable type than the thin and gray-faced old-style letter in which most books had been printed for many years. The thin lines of this Century face were made of a perceptible thickness, the serifs were shortened, and the body-marks protracted a trifle. To secure a proper relief of white space within each character, the round letters were made a little taller. To proportion the type for a large page in two columns and with narrow margins, and to give the usual amount of reading-matter in a small space, the characters were compressed a trifle. The lower-case alphabet of a modernized old-style on long-primer body, previously used, was below the standard of measurement fixed by the Typographical

Union, for it had round letters that were remarkably low as to height. The lower-case alphabet of this style is equally thin, permitting as many letters to the line, but the round letters are taller and more distinct.

The changes from old standards, purposely made by the designer, were not of great importance, but most of them were in directions that had been usually avoided by type-makers. The thickened lines enabled the pressman to produce print that is really black and not apparently gray, as was unavoidable in presswork on small sizes of

modernized old-style. This face was modeled and cut by Mr. L. B. Benton, and is made on two bodies by the American Type Founders Company. For long lines of poetry printed in duodecimo or in any smaller form, as well as for all compact composition set in a narrow measure, this style of face is properly adapted. It will prevent the unpleasing turning-over of a short word or of a single syllable in a following line, which mars the general effect of composition.

THESE ARE THE SMALL CAPITALS, which are a trifle higher than the round letters of the lower-case, and these the italic characters of the font.

Of this font we have two pairs of cases for roman, one pair for italic, and two cases for accents.

10-point. A. T. F. Co.

CENTURY BROAD-FACE

THE CENTURY BROAD-FACE was made by the De Vinne Press for service on books to be set in a broad measure, which do not require a compression of letters for the saving of space. It retains the thickened hair-line, the short serif, and all the characters of the face described on the previous page. The purpose of the designer was to give each letter a larger face than is usual in text types of this body, with as much boldness of line as would be consistent with the greatest legibility. This desired largeness with boldness has been carried to its fullest extreme. It is a readable letter when it is set solid, but it is much more readable when the lines have been separated by a thin lead. A twelve-to-pica lead gives this body the boldness of 11-point.

Types are not made more readable by giving them larger and blacker faces. The attractiveness of a very black-faced type when used in one line or in a few lines becomes repelling when it is used in a mass. A page of fat-faced type compels a greater strain on the eye than a page of ordinary book-type. What a reader needs for a pleasurable reading is the instant visibility of every stroke in every letter, but this visibility is dimmed when the types have too much black. The strength of the black is weakened when its relief of white space is diminished.

THESE ARE THE SMALL CAPITALS, which are a trifle higher wider, and bolder than those of the series on the previous page. These small capitals can be used for sub-headings where those of ordinary form have proved indistinct and unsatisfactory. *These are the italic characters of this font.* The lower-case alphabet of this face slightly exceeds the standard of measurement fixed by the Typographical Union. It is as readable as some broader faces, and it takes in more words to the line.

Of this font we have six pairs of cases and one job case for roman, one job case for italic, and one case for accents.

Deceptive Proofs

ARTISTS OF EMINENCE used to draw and paint on
blocks of boxwood with the minuteness of minia-
tures on ivory. With wonderful ingenuity, en-
gravers on wood cut on the blocks so prepared sharp and
slender lines intended to reproduce fairly every suggestion
of light and shade made by the designer. From the block
so engraved, a proof upon transparent China paper was
cautiously taken by rubbing the
back of this paper with an ivory
burnisher. With full light over
the print side, and reflected light
radiating through from the un-
printed side, the proof might show
a clever imitation of copperplate
delicacy. The proof was admirable, but it was not printing.
The reproduction of the effects in this sophisticated proof
by the hand printing-press was slow, expensive, and in
most instances absolutely impossible. ¶ One job case.

was turned aside in a wrong path by the Revival of Engraving on Wood, when it tried to rival Copperplate.

Capitals 44¹/₂ Lower-case 32
30-point. A. T. F. Co.

EARLY DESIGNERS and engravers on wood presented subjects for illustration in outline, with but occasional attempts at the conventional treatment of light and shade. Dürer's "Little Passion" and Holbein's "Dance of Death" are fair exhibits of this simplicity of treatment.

These great artists fully understood the difficulties of engraving on plank wood, the roughness of hand-made paper, the weakness of the old hand-press, and the troubles

of the hand-pressman who tried to reconcile these incompatibles. With good sense and kindly feeling they refrained from refinements in design that they would have liked; they really tried to abridge useless labor by the pressman who printed the blocks.

SCOTCH-ROMAN

Old-style goes out of use.

DURING the latter part of the eighteenth century indications appeared of weariness with the old-style type that had been in fashion for about two hundred years. It was tolerated and accepted when from the foundries of Caslon or Baskerville, but old-style was no longer admired as the model of good form. There was a demand for change. Bodoni of Italy, discarding old rules and traditions, began to design types on a new plan. Didot of Paris made similar experiments on lines that were entirely his own. Joseph Jackson, an apprentice of the first Caslon, was planning a new face of type of huge size for the Macklin Bible in seven volumes of large folio, and the leading printer of London said when it was published, that the Jackson type was "a pattern of the most perfect symmetry to which the art had arrived." Robert Thorne of London was also

6-point.

devising his fat-face, which had admirers for many years. Joseph and Edmund Fry of Bristol, William Martin, the successor to Baskerville, and Thomas Cottrell, an apprentice of Caslon, were breaking away from staled models, and struggling, each in his own mode, to put more breadth to letters and more readability to print. All the experimenters avoided thinness, stiff curves, and the general angularity of the old-style. *Of this size we have three pairs and one job case for roman, and one job case for italic.*

About the long f.

SCOTCH type-founders soon joined the seekers for change, and this Scotch-Roman, as it is now called, was a contribution to novelty made for and first used by the Ballantyne Printing House of Edinburgh, in the first decade of the nineteenth century. Its most striking peculiarity to the inexperienced is the greater breadth and openness of the letters without appearance of undue obesity. It has no eccentricity save the almost unnoticeable flat top to the lower-case t. The merit of this new face was undeniable. There was a clearness and roundness about every character not shown by any founder who adhered to the old-style traditions. The new style had to run the gauntlet of prejudice. There were publishers and readers who regarded

8-point.

the long f, the connected ct, and other conjoined letters that had been preserved for centuries, as indispensable attachments to type. Especially sacred was the very tall f. An English bishop declined to accept the reprinted copies of an edition of a book in request he had ordered from a London printer who, following the new custom, had used *the short s only*. *He said it was not correct without the long f.* **¶** *Of this face we have one pair and one job case for roman, and one job case for italic.*

SCOTCH-ROMAN

A FAULT OF ENGLISH PRINTING about the close of the eighteenth century was the grayness of the ink and the feebleness of the print. Instead of using blacker ink and finer paper, which would compel increased expense, or of making ready the forms of type with more care, the remedy for feeble printing was sought in a type of blacker face. It was then believed that a broad-faced letter, that might hold and transfer to paper a larger supply of ink, would effectually prevent the fault.

To meet this demand, Robert Thorne, the type-founder of London, in 1803 gave up his work on an admirable series of old-

style type just cut by him, and not much, if any, inferior to the types of the first Caslon, and introduced instead an exaggeration of the over-widened thick strokes of the Didot type. Though condemned by the best printers of the time, this fat-faced type, as it is now phrased, was much admired by the public and was freely used in books. ¶ *Of this font we have one case, one capital case, and one sort case for roman, and one job case for italic.*

Peculiarities of Caslon Style

The peculiarities of the old Caslon style, as shown on pages 179 to 191, may need a little explanation. Note the breadth of the thick strokes of each letter and their protraction before they change to a hair-line or connect with another stem, as may be plainly seen in the arch of the m and n, and the curve of the c, e, and o. The hair-lines are firmer, although shorter, than in modern-cut, and the serifs at the foot are shorter and stronger, but seldom bracketed; the serifs at the top, as in the l, d, p, h, are angled and strongly bracketed.

NEW CASLON

Inland Type Foundry

Peculiarities of Modern-face

The defects of the Old Caslon style are: too long a beak to the f and j; unnecessary narrowness in the s and a, and in some capitals; too great width of the C, O, and V. But these are trifles. In general effect the Caslon is bold but not black, clear and open but not weak nor delicate. It was made to be read and to withstand wear. Variations in style may be detected in a comparison of different sizes of this cut, but it is fairly uniform as to general effect throughout the series. The modern-face is in strong contrast to the Caslon style. The stems are sometimes relatively thicker, *but in all curved lines are shorter. The serifs are much longer; in many of the capitals they are strongly, but feebly, connected and are sharper.*

Space Occupied by Type

One pound of metal type, as packed and sold by type-founders, covers a space of about three and six tenths square inches. To find the weight of one page of type composed in high spaces, divide its number of square inches by the figures 3.6. To find the weight of a font for a given number of pages, provision must be made for a large surplus. The proportion of this surplus is variable. For a small font, the type-founder's rule is to add one half to the computed weight of the composed types. For a font of two thousand pounds or more, this surplus need not be relatively as great; an addition of one fourth to the weight of the composed matter may be enough. All calculations of this kind are but guesses. No printer or type-founder can exactly foresee how unequally copy yet to be written will exhaust sorts. For all work that has to be done in haste, for newspapers and magazines that have to keep in type postponed articles or alternated advertisements, a font of twice or thrice the weight of the composed matter will not be enough. On newspapers it was customary to allow three, six, and sometimes ten days' supply of type to each compositor. Quadrats are the sorts most frequently deficient in the ordinary font when it is applied to general bookwork. Next in liability to excessive demand are figures, which are soon exhausted by a series of tables. Every large book or newspaper office doubles, and sometimes quadruples, the amount apportioned to some characters of the scheme.

CLASSIC

SUPERFICIAL READER may think that we have already enough of Old-style faces in printing type. This is a hasty judgment. The uneasy feeling that continually demands something entirely different has induced the making of this new face, which has recently appeared in Germany, and is there known as Römische, in some foundries as Renaissance, and in the United States as Classic. It is the outcome of the never-ending attempt to get as many letters in a line as is possible with readability and without undue thickening of the stems of the type. There seems to be no other face of type in which these contrary conditions are more completely united. It is readable, but not too bold. Round letters are almost as tall as those of the Cadmus face, but the capitals have more distinction.

Each letter is compressed, but a satisfactory amount of white space has been left between interior lines. Serifs are short, hair-lines are firm, and the new face promises a durable letter. This Classic face was first used by the De Vinne Press for the printing in Greek and Roman of an edition of THEOCRITUS, BION, and MOSCHUS for the Bibliophile Society of Boston.

This face on 12-point body is frequently selected in preference to Caslon Old-style on 14-point body as more compressed but equally readable. ¶ *Of this font we have one job case for roman and one job case for italic, and matrices for the linotype machines.*

CLASSIC

NOVELTIES have to be considered by the publisher who wants to make a new book attractive. There are new fashions in paper and binding, new methods of engraving, new processes for printing in black and colors, new arrangements of pages, and new styles of printing types. The types that fill the page and receive closest scrutiny seem to be of most importance.

This is the publisher's reasoning; if the new book can be printed in a face of letter not used by any rival, its pages should be invested with a charm that will command respectful attention.

This survey of possibilities with types invites to dangerous ground full of pitfalls. Pleasing types are not always proper types. A book on an ecclesiastical or medieval subject may be wisely set in an acceptable form of black-letter, an early Italian book in italic, the plays and poems of the Puritan century in an imitation of the types and styles of its time, but at or about a certain point not easily defined tolerance stops. The black-letter must be of a face

sanctioned by steady usage; modern variations admirably designed are disliked by book-lovers. Readers and reviewers are critical. Types of old time, attractive enough in books of that time, are not so attractive in modern books on modern subjects. The ordinary reader who is also a book-buyer has the belief that the dress of the book, as of the man, should be the dress of to-day, and not of the fifteenth or seventeenth century.

Nor does tolerance stop at the revival of old fashions. Ornamental or fantastic forms of letter that convey the peculiar notions of the writer are barred out of book texts. Even the autographic lettering of an artist like William Blake, admired by his disciples, is unacceptable to the book-buyer. Pleasing it may be on one page of a magazine, but it will make unsalable the book filled with it. To be acceptable the text of a modern book must be easily readable. Like coins of money, book letter must be identified at first glance. Serious variations in shape are resented as attempts on the part of the designer to obtrude his own conceits more than to make plain the subject-matter. Want of individuality in lettering may be regretted, but features of uniformity disliked by the artist are the ones that make print attractive to the buyer. ¶Of this font we have one job case for roman and one job case for italic. We have matrices for this face on the linotype machines.

10-point body (9-point face). Genzsch & Heyse

The Text Types of the De Vinne Press

CLASSIC ANTIQUE

Genzsch & Heyse

WHEN paper and vellum were scarce there was need of economy in their use, but there is no excuse now for a needless huddling together of types. The book-buyer of to-day does not accept as artistic the compact treatment in a modern book. He may call it penuriousness—the saving of paper and presswork to the damage of eyesight. Yet the attempt to make a book inviting with plenty of white space between single letters of lines of display, between the lines of a paragraph, and, worse than all, “the rivulet of type in a meadow of margin,” is a swing of the pendulum too far on the other side. The buyer of a book wants its print more than its paper, but he wants its print readably apportioned upon the paper.

To make print attractive the eye of a reader must be diverted and relieved from the dreary monotony of a solid composition of types always and everywhere the same. White space at the ends of lines of poetry, between verses of the Bible, between paragraphs and chapters, and full-blanks or half-blanks—all those are great helps to easy reading, ready reference, and a better understanding of the subject-matter. Early printers undervalued these aids. How the modern school-boy would rebel over a text-book at the welding together in solid, unbroken lines of the declensions and conjugations of words! ¶ *Of this face we have one job case for roman and one job case for italic.*

TYPES should be made for readers. The punch-cutter's hair-line that stops just before invisibility is kept indistinct by the pressman who scantily inks with a hard roller, and then with the feeblest impression impresses types against an inelastic surface on dry and hard calendered paper. This weak and misty style of printing, admired by some printers and publishers, is disliked by all who believe that types should be made for the needs of the reader more than for an exhibition of the skill of the pressman or type-founder. ¶ *We have one job case for roman and one job case for italic, and matrices for linotype composition.*

DISTINCTNESS is always of the greatest importance. The rights of readers deserve more consideration. The rules that editors and men of business apply to writing should be applied to book-types. The handwriting that cannot easily be read, even if its individual letters have been most daintily and scientifically formed by a master of penmanship, with the sharpest of hair-lines and the greatest profusion of flourishes, is quite as intolerable as that which is slovenly and illegible. No printer desires it for his copy; no merchant tolerates it in his account books; no one wants it in his correspondence. ¶ *Of this face we have one job case for roman and one job case for italic.*

CUSHING

From American Type Founders Co.

THIS CUSHING TYPE illustrates fairly one of many attempts to improve the readability of printing, which began with the abolishment of the RAZOR-EDGED HAIR-LINE that has been so damaging to the legibility of type. The dazzling effect produced by this hair-line on page 137 of the French Face of Didot may also be seen in other forms of fat-faced letter, in the planning of which designers have thought it meritorious to enforce the strongest possible contrast between thick and thin strokes. ¶ *Of this face we have one pair of cases for roman and one job case for italic. No diphthongs.*

Measurement in 12-pt. ems

CAPITALS	10 ¹ / ₂
SMALL CAPITALS	7 ³ / ₄
Lower-case	7 ¹ / ₂
ITALIC CAPITALS	9 ³ / ₄
Italic lower-case	6 ¹ / ₂

6-point

THIS STYLE HAS BEEN USED for the composition of pages in advertising pamphlets, as well as for extracts, mottos, and similar matter IN STANDARD BOOKS. In mercantile printing its small capitals are of service for the presentation of names that have to be set in column form. ¶ *Of this face we have one pair of cases for roman and one job case for italic. No diphthongs.*

Measurement in 12-pt. ems

The Text Types of the De Vinne Press

LOUIS XV

(French Antique)

FIFTY YEARS AGO ALL BOOKS AND NEWSPAPERS AND MUCH JOB WORK

WERE printed on damp paper, and the process of wetting it down compelled extra labor. After printing the paper was dried on loft poles and its indents flattened out by a hydraulic press. When calendering machines were used job printers discovered that the labor of wetting down could be safely omitted for paper that had been previously smoothed by cold or hot pressure. The next improved process was the substitution of a hard card board impression surface in place of the elastic, woolen or india rubber blanket which indented the paper. These improvements were helpful enough, for the neat printing of types, but when photo-engraving was fairly established, a printing paper smooth as polished glass or plated metal was needed. This smoothness enabled the pressman to show hair-lines with all the delicacy desired by the engraver. It also enabled the pressman to print the surface only of a type or cut without an over-lapping of impression on the side of the hair-line. Improvement of the presswork of engravings proved a serious damage to the types of letters, for a strict surface impression made the letters appear thinner and feebler than had been intended by the designer. Ever since the proper appearance of type has been sacrificed for the improvement of engraved pictures.

On dry paper the sharp hair-line and narrowed thick stroke were unavoidably made not so distinct as they had been when printed upon dampened paper. The French printers who had refined and sharpened hair-line for many years, were the first to try a new experiment in making small types more readable. They could not or would not give up the dry paper process, but they did thicken the lines of type without making them muddy or indistinct. This light-face of antique was made about thirty years ago to the order of the publisher Quantin. The experiment was successful. Type of this 5-point body was more readable than a 6- or 7-point of roman face.

Capitals 9

5-point of Turlot

Lower-case 7

BODY 6 OF THIS FRENCH FACE, IN CAPITAL LETTERS ONLY, HAS BEEN USED WITH THE APPROVAL OF LITERARY CRITICS AS A TEXT TYPE TO THE ENTIRE NEGLECT OF LOWER-CASE SORTS. THIS METHOD WAS NOT ENTIRELY NEW. IN THE YEAR 1791 BODONI OF PARMA PRINTED AN EDITION OF "ANACREON" IN CAPITAL LETTERS ONLY, AND IT WAS MUCH ADMIRER BY BIBLIOPHILES.

Capitals 10½

6-point of Turlot

A STUDENT OF THIS BOOK, AND OF ALL PLEASING BOOKS PRINTED IN CAPITALS, SHOULD NOTE THAT THE PRINTER SEPARATES THESE LINES OF CAPITALS WITH WIDE BLANKS WHICH ARE REALLY NECESSARY TO GIVE PROPER LEGIBILITY TO THE PRINT. THE HUDDLING OF LINES OF CAPITAL LETTERS AS APPROVED BY WILLIAM MORRIS AND OTHER AMATEURS IS NOT RECOMMENDED.

Capitals 12

7-point of Turlot

THE DE VINNE PRESS HAS PRINTED THE DESCRIPTIVE TEXT OF ROBERT HOE'S "EXAMPLES OF BOOKBINDING" IN TWO VOLUMES LARGE QUARTO, ENTIRELY IN THE CAPITALS OF THIS BODY. CAPITAL LETTERS ONLY, BUT OF THE ELZEVIR STYLE, WERE ALSO USED BY MESSRS. DODD, MEAD & CO. IN 1886, FOR AN EDITION OF "THE BLESSED DAMOZEL" OF ROSSETTI, WITH ILLUSTRATIONS BY KENYON COX.

ENGRAVERS' HAIR-LINE No. 644

THERE IS A GENERAL BELIEF THAT TYPES are made to be read, and to be read without discomfort. This face seems to have been cut to demonstrate the skill of the punch-cutter, who has done his work admirably and thoroughly. Capitals, Small Capitals, Lower-case and Figures are symmetrical and harmonious in all combinations. It was once largely used for the legend or descriptive lines on the tissue paper that faced full-page cuts, but is now out of favor. Never select it for Programmes, or any form of Ceremonial Printing that must be read by artificial light. HAVE RESPECT FOR THE EYESIGHT OF PEOPLE WHO USE SPECTACLES 1234567890.

CELTIC No. 642

CELTIC IS A FORM OF EXPANDED TYPE

In which the thin stroke has been made of visible thickness to give it greater clearness. It has some peculiarities that make exact classification difficult, for it is as near akin to antique as it is to roman. ¶Of this font we have two job cases for roman and one sort case for capitals. No small capitals, no italic.

Capitals 14 6-point, old body. Bruce Lower-case 10½

ITS GREATER BREADTH AND FIRMNESS

of line make it a plain and readable letter, useful for running titles in pamphlets and for all short lines of display, but it is now somewhat neglected by advertisers for new styles that are really inferior in design and in general effect. ¶Of this font we have one job case only. No small capitals, no italic.

Capitals 17½ 8-point, old body. Bruce Lower-case 12¾

THIS SIZE OF BREVIER CELTIC

is a bit lighter in face than the one of same body from the Bruce Foundry, and modeled with equal care. It may be used with good effect for mottos or extracts requiring a distinct shape of letter that is not very black and bold. ¶Of this face and body we have one job case only. No small capitals, no italic.

Capitals 17 8-point, old body. Farmer Lower-case 12¼

FIGURES AND DOUBLE LETTERS

are furnished to all the fonts with lower-case, but none have accents. Celtic is frequently selected by buyers of printing who want a bold and broad face of type that will withstand the hard usage of printing a long edition on a cylinder machine. ¶Of this font we have one job case. No small capitals, no italic.

Capitals 22 10-point, old body. Bruce Lower-case 14½

ENGRAVERS' ROMAN From the American Type Founders Co.

Has three distinct sizes of Capital Letters, made to line one with another, but all are cast on 6-point body. Each size can be used independently, or any two sizes can be connected as capitals and small capitals. All the sizes have figures.

1	IS ALMOST MICROSCOPIC IN ITS SMALLNESS. IT IS NECESSARILY FRAIL, IS NOT EASILY READ, AND SHOULD BE SELECTED WITH DISCRETION	8 ¹ / ₂ ems
2	THIS NO. 2 SIZE IS WIDER AND MORE READABLE, BUT SMALLER THAN OLDER STYLES OF EXPANDED	11 ¹ / ₂ ems
3	IS OF ABOUT SAME HEIGHT AS THE PEARL EXPANDED OF BRUCE, BUT NOT SO WIDE	14 ¹ / ₂ ems

THESE SIZES OF SMALL ROMAN CAPITALS ARE CAREFUL IMITATIONS OF THE FORMS MADE BY ENGRAVERS ON COPPER FOR CARD TICKETS AND INVITATIONS TO MEETINGS OF CEREMONY. ALTHOUGH OF GRACEFUL SHAPE, DO NOT SELECT THIS STYLE FOR BOOK OR MERCANTILE WORK, FOR WHICH HAIR-LINE GOTHIC, CELTIC, CUSHING OR SMALL ROMAN CAPITALS SHOULD BE PREFERRED. IT IS A JOB, NOT A BOOK LETTER. IT NEEDS WIDE LEADING AND WIDE SPACING ALWAYS, AND OFTEN THIN CARD-BOARD BETWEEN LETTERS IN THE SAME WORD THAT ARE TOO CLOSE. ITS MERIT IS DAMAGED WHEN THE TYPES ARE HUDDLED.

1 2 3 4 5 6 7 8 9 0

1 2 3 4 5 6 7 8 9 0

Nos. 1, 2, 3, in combination

Engravers' Roman is not a pleasing selection for a line in Book Work or Commercial Job Work. It may be used, if requested, for a Visiting or Professional Card, but never for an ordinary Business Card or for a Bill- or Note-head or Mercantile Circular or Advertisement.

Its value as a good type for occasions of ceremony is seriously degraded when it is mixed in composition with large coarse types.

The Text Types of the De Vinne Press

OTHER ROMAN FACES, CONDENSED AND EXPANDED

ABOUT TWO HUNDRED AND THREE SIZES OF PLAIN Roman book types, many of which are in full series of distinct face, as shown in these specimens, should be enough to please tastes that require special consideration. To most buyers and readers they are more than enough, for they often confuse selection.

Yet they do not seem to be enough for all kinds of printing. There is continued demand for Roman types that are bolder or lighter, broader or thinner, elongated or obese and squatty. To meet these demands we provide Title or Fat-face, Condensed and Extra Condensed Skeleton, and Expanded, of which specimens are submitted on the following pages under many arbitrary and misleading names. For some of these faces a mated Italic has been provided.

ITALIC, the mate of Roman, is often selected for paragraphs and sometimes for short prefaces in books, as well as for the full-page letter circulars of merchants. We have many forms and styles. Use plainer styles for books.

CONDENSED ROMAN is a neglected letter in larger sizes. It gives good service in jobs that need some display but in a face that need not be overbold, black, and coarse. Its smaller sizes are needed in table matter, music, labels, and advertisements. The lower-case of this style is more effective than capitals only.

EXPANDED ROMANS are rarely needed in book work, but are of use in open displayed composition. The *Celtics* offer pleasing change from Roman. Engravers' Roman of small sizes is most needed in ceremonial printing. It needs wide leading and often hair-spacing between its too close letters. Do not use it in book work when plain capitals of good form can be had.

In any measure of Ordinary Width

Capitals 23

40-point, old body. Farmer

Lower-case 16¹/₂

MANY kinds of printing call for types that are extremely thin. Headings to column work in tables of figures, and words that cross all the columns and must be kept in one line, need these pinched letters. It is better to use a thin letter that will prevent the abbreviations that are often misleading in sense and are so made by the use of too many periods and apostrophes. This face of 6-point Condensed has thicker stems than those of the 8-point styles by its side. It will not wear so well under a long and severe impression.

6-point No. 5, old body,
A. T. F. Co.

SIDE-NOTES and cut-in notes may need condensed letters of great thinness. When the author permits, a condensed type is to be preferred for cut-in notes to italic that has easily broken kerns, but do not use a thin letter for notes of this kind when the type is not easily readable. In annotated Bibles and Testaments ordinary roman letter is preferred for side-notes. Ordinary roman lower-case is quite as plain; it withstands more wear and does not fill with ink.

8-point No. 603,
old body. Bruce

EXTRA condensed capital letters are most useful as initials in columns of very narrow measure. The objection properly made to the obscurity of a long line of thin letters does not apply to the single letter that is easily recognized. Condensed type is also of service in small labels, and the style is tolerated even when letters are obscure.

8-point No. 164,
old body. Bruce

EXTRA CONDENSED TYPE may be a useful type in One Line, but it is Not Pleasing when used in Many Lines of Lower-case as the text letter of a paragraph.

ALDINE

From the Bruce Type Foundry

ALDINE is the name given to a compressed and carefully designed form of Title or Fat-faced type which occupies less space in width. It is of more pleasing shape and is almost as distinct as the broader face. Newer Fashions have supplanted it in the belief of some advertisers as a letter of display, but not all the novelties can be accepted as improvements. The smaller sizes continue to be preferred for Subheadings and Side-headings and for the Cut-in Notes of pages in larger roman letter. Aldine has a symmetry and harmony with ordinary roman text type that is not found in the ordinary faces of Gothic and Antique types of display.

NEVER WIDE SPACE LOWER-CASE CHARACTERS

Of any Style without Special Order. Spaces between Letters make the word so treated unsightly. They break the connection of words and make their comprehension difficult to understand

Capitals 12¹/₂

8-point, old body

Lower-case 9¹/₄

THE SPACING OF CAPITALS

Is often desirable when there is a Fair Space between the Lines of Display in Open Composition. Do not space them in any kind of Solid or Thin-ledged work

Capitals 16

10-point, old body

Lower-case 11¹/₄

A SIDE-HEADING OF LOWER-CASE

Should be preferred for Solid Composition. A long row of Capital Letters is not so neat as Lower-case for this purpose

Lower-case 36¹/₂

THE SUBHEADING IS MORE DISTINCT when it can be set as a Short Line with quadrats at each end that give to it some additional Relief of White Space. The Heading is not improved, but is Made Indistinct, when Spaces are put between Single Letters for the purpose of stretching out the types so that they will meet extreme ends of the measure.

Capitals 10

6-point, old body

Lower-case 7¹/₂

Types of the De Vinne Press

EXTRA CONDENSED TITLE

EXTRA CONDENSED TYPE can be used occasionally in Music, Labels, Narrow Measures, in the Contracted Headings of Tabular Matter, and in Lines of Words that have to cross Many Columns of Table Figures. Prefer lower-case of plain letter.

10-point No. 5, old body. A. T. F. Co.
Capitals 8 $\frac{3}{4}$ Lower-case 7 $\frac{1}{4}$

NEVER SELECT Extra Condensed in the form of CAPITALS for a Line of Display, for the only Reason that you can put Many Letters in one line. Two lines of Smaller Type may be better.

10-point No. 5, old body. A. T. F. Co.
Capitals 10 $\frac{1}{2}$ Lower-case 8 $\frac{1}{2}$

For other variations of Extra Condensed type of thick lines on the ordinary roman model, see Extra Condensed De Vinne on pages 279 and 280, and Latin Condensed on pages 378 and 379. Extra Condensed letters with thick lines are often muddy in presswork.

Many of these Title types were bought to be used for the side-headings or displayed words in texts of roman type on the old bodies, and they are retained in case for that purpose, as well as for valuable odd sorts that were made to order for special work. But few of them line with roman.

Subheadings of two or more lines in Title type call for discretion. One line in solid work should make the display wanted; two lines should be separated by a lead. Three or more lines, as in a paragraph, are not inviting but forbidding. Reading matter so treated presents a black blotch of huddled and relatively indistinct letters. *Never thin-space any lower-case letter.*

Romans, Condensed and Expanded

DE VINNE

THIS face is the outcome of correspondence (1888-90) between the senior of the De Vinne Press and the late Mr. J. A. St. John of the Central Type Foundry of St. Louis, concerning the need of plainer types of display, to replace the profusely ornamented types in fashion, of which the printers of that time had a surfeit. The De Vinne Press suggested a return to the simplicity of the true old-style character, but with the added features of thicker lines and adjusted proportion in shapes of letters. Mr. St. John approved, but insisted on grotesques to some capital letters in the belief that they would meet a general desire for more of quaintness. Mr. Werner of the Central Type Foundry was instructed to draw and cut the proposed face in all sizes from 6- to 72-point, which task he executed with ability.

The name given to this face by Mr. St. John is purely complimentary, for no member of the De Vinne Press has any claim on the style as inventor or designer. Its merits are largely due to Mr. Werner; its few faults of uncouth capitals and out-of-line arabic figures on the first issue show a desire to please eccentric tastes and to conform to old usage. The new face found welcome here and abroad; no advertising type of recent production had a greater sale.

Some of the smaller sizes have been supplemented with an italic of similar design. A condensed and extra condensed series have also been added to the most used regular bodies first made, in which all the peculiarities of the first form have been maintained. Each series shows the same thickness of stem, and their letters line one with another in any combination.

This paragraph shows that the three different shapes of this face—ordinary width, condensed, and extra condensed—can be combined in the same line so that important words can have the largest and relatively unimportant words a smaller size without any appearance of impropriety. Useless divisions can be avoided, even spacing maintained, and an appearance of symmetry given to the composition, that is impossible with any broad letter in a narrow measure

TITLE OR FAT-FACE

From the Bruce Type Foundry

FAT-FACE TYPE IN TWO STYLES

The No. 140 face shows the thicker shape made about 1820 for very bold print

Capitals 20¹/₂ 10-point No. 140, old body Lower-case 14¹/₂

TO JOB PRINTERS thick-faced types were welcome. The thin romans then made by English type-founders for book work were light and not attractive to the hasty reader, but the thick face compelled attention at the first glance. It was used not only for advertisements but even as a text letter for books.

Capitals 10¹/₂ Lower-case 7¹/₂
5-point No. 140, old body

TITLE TYPE for book texts has been selected by amateur printers of our own time, but this experiment has not met with general approval. Readers object to a modern book, even when admirably printed on hand-made paper, that has the solemnity of a gothic manuscript.

Capitals 12 Lower-case 8¹/₂
5¹/₂-point No. 140, old body

A FAT-FACE OF 1820 that Overbears all other Faces

Capitals 36¹/₄ 18-point No. 140, old body Lower-case 24¹/₂

THE No. 143 STYLE now finds few admirers. It is seldom seen in recent books, but does occasionally appear in advertisements or in a careful reprint of some scarce or famous book of an innovating English printer of the early nineteenth century.

Capitals 14¹/₂ Lower-case 9¹/₂
6-point No. 140, old body

BOOK PRINTERS OF EXPERIENCE refuse it as a text type, but they do give it limited employment for the sub-headings of dictionaries and gazetteers in places where its gloom is fairly relieved by the grayer color of surrounding roman type.

Capitals 12 Lower-case 8³/₄

Italic Faces

Italic Types of the De Vinne Press

ITALIC

ITALIC is used for running titles, subheads, and emphasized words of book pages in lines where no other style would be acceptable. In job work the lower-case series of a large size should be preferred to its capitals, which often show unpleasant gaps at the meeting of letters that unavoidably have different angles of inclination. These irregularities are now more successfully concealed or evaded in Modern faces than in the so-called Caslon Old-style. The lighter faces of Modernized Old-style need more white space about them than the Caslon. Most merchants prefer their printed circulars in a large and readable italic to any form of typographic script.

Avoid the selection of Modernized or Caslon Old-style for any line of capitals that requires arabic figures. The figures furnished by the type-founders answer their purpose well enough in lower-case composition, but they do not line and are absurdly small and insignificant when used with capital letters. The continued use of roman numerals for dates or amounts in the few lines of display required in book work is the result of a confirmed dislike of the unsymmetrical figures that accompany every font of Old-style.

Italic rarely finds employment as the text type for a standard book, but it is occasionally selected for prefaces and introductions to texts in roman letter. One of the recent novelties in book work is the use of italic for side-notes in places where its kerned letters are unduly exposed and liable to be broken. The unpleasing contrast of upright arabic figures which may have to be used for marks of reference in side-notes is another objection.

Another novelty is the selection of italic in running titles and in display work for the articles, prepositions, and other unimportant words of a sentence. Old-style Italic is the face preferred for this purpose. It seems to be the unconsidered imitation of a practice made by impoverished printers of the seventeenth century, who had to resort to italic when there were no sorts in a case of roman for the proper composition of the book. There is no good reason why a practice should be maintained which is really an evidence of poverty and not of art or skill.

Specimens of the smaller sizes of the regular italics usually furnished with fonts of roman, can be seen with their mated romans in this book on pages following 133.

Italic Types of the De Vinne Press

CHELTENHAM BOLD ITALIC

From the American Type Founders Co.

CHELTENHAM BOLD ITALIC retains some of the peculiarities of the Cheltenham Old-style Roman, but its general effect is that of an improper mate, for it was made a type of bold display and not a text type. Its characters are broader, its lower-case much coarser, than its Roman prototype. It gives useful service in showy advertisements, but it is not acceptable in books or even in fine job work. The smaller sizes may be approved for sub- and side-headings, and even as a text type for small paragraphs, but the larger sizes are not of good service in books of fine printing.

Capitals 11¹/₂

Lower-case 8¹/₄

6-point

THE ITALIC FORM OF LETTER generally accepted as a connecting link between upright Roman and inclined Script is supposed to have all the clearness of the first with some of the graces of the last-named style. Advertisers fancy it for its visible departure from the formality of Roman letter, in the belief that the inclination that gives emphasis to italicized words in a roman text will be as forceful in lines of display.

Capitals 13¹/₄

Lower-case 9¹/₄

8-point

A CONCLUSION NOT ALWAYS CORRECT

A line of Inclined Type as the heading of a Paragraph or as a line of display in Open Composition at once attracts the eye by its unlikeness to the Roman Forms about or below it. If quick arrest of attention is the only purpose, Italic is wisely selected.

Capitals 17¹/₂

10-point

Lower-case 12¹/₄

DOES ONE LINE OF ITALIC

Interjected in many lines of Vertical Type improve the general effect of the Composition? Does it not weaken harmony and symmetry? Is it not a False Note in Music intended for its harmony?

Capitals 19¹/₃

12-point

Lower-case 13¹/₄

OTHER ATTEMPTS TO CHANGE

Structure of Form in Letters have been rejected. Backslope types that lean backward, and Italian niceties that transpose thin and thick strokes, are now entirely out of favor.

ATTRACTIVENESS is not always increased in an advertisement by the use of a new and queer type which may startle the reader on its first presentation. When other advertisers make free use of the same type, the possible coarseness and imperfections of the design become glaring and offensive. It soon becomes hackneyed and goes out of use. An examination of the type-founders' specimen books of the last century will show hundreds of faces then approved and now unsalable. The finical, fantastical and florid, as well as the needlessly coarse, are no longer tolerated, but the letters of simplicity and symmetry there shown are now in greater favor than ever.

Italic Types of the De Vinne Press

POST No. 2 ITALIC

THE OLD ORDER CHANGES.
Good form in type and symmetrical arrangements of composition do not find favor now with some advertisers. They seek uncouth types and careless type-setting, apparently in the belief that the Hasty Reader will see artistic freedom in slovenly types and careless workmanship.

Capitals 13 Lower-case 9 $\frac{1}{2}$
6-point. A. T. F. Co.

THIS POST OLD-STYLE
Italic was designed as a mate for the Post Old-style of upright form. It has some swash letters and a few Old-style characteristics, but it is of a lighter face than the roman.

Capitals 15 Lower-case 11 $\frac{1}{4}$
8-point. A. T. F. Co.

IT IS IN ORDER for any participant of a masquerade to appear as a count or a coal-heaver, as a circus clown or a clerical of the Church. It is certain that all who are uncouthly dressed will attract attention. Is it not also certain that a preference for coarseness is rated an indication of personal taste?

Capitals 18 $\frac{1}{4}$ 10-point. A. T. F. Co. Lower-case 13 $\frac{1}{4}$

ADVERTISERS OF THE PAST
Hoped to merit special consideration through the neatness of Types and Composition

Lower-case 27

NOT all italics are thin and condensed. There are a few forms of broad face, but they are arbitrarily excluded from strict book work, and find most use in law blanks, business forms, and ceremonial printing. Law italics are of light face and not disfigured with the eccentricities of form that are annoying to many readers. The sizes we have are on 8- and 10-point body.

Another style is known as Hair-line or Lithographic, of which we have five sizes. Another style in two sizes, fanciful but readable, is known as Venetian. Inclined Roman on 10-point body may be rated as italic.

Display lines of Italic Capitals in all the larger sizes should call for unequal spacing between the letters that are too close. A B or I W may seem too close. W I or V A may seem too far apart. In composition attempt should be made to keep the thick strokes equally distant by irregular spacing.

The ungainly gaps between some capital letters of Italic and the too close meeting of other letters in some specimens show the types as they have been cast by the founders. In an overcrowded line of words these faults cannot be corrected by the compositor, but they may be in the line that is not crowded. When the spacing of a line is fairly wide, thin leads or spaces of cardboard may be inserted to keep the thick strokes or stems of meeting letters at proper distance. When a wide gap appears between two capitals, in a line that has enough of blank space, space other capitals of the line to hide this defect. Do this in composition, before the fault is marked by proof-reader or author.

One swash letter is enough in one word. Avoid repetition; when two meet the effect is disagreeable.

Capitals 37¹/₄

30-point

Lower-case 28¹/₃

NIAGARA

From the Keystone Type Foundry

IS the name given by the Keystone Type Foundry to their series of inclined type of very bold face, which is here shown in eight sizes from 6-point to 30-point. Each size has figures of regular form and full height. Although condensed, it is a very readable letter. The matrices for each letter have been carefully fitted and proximate types in any combination do not show ungainly gaps or occasional interference. Nor has any attempt been made by the designer to add eccentricity of form or decorative flourishes to any character. For this reason it is much esteemed by advertisers and job printers as a useful letter for general service. A hasty reader can take in the intent of the writer at first glance. He is not annoyed by the peculiarities of flourishes or novel shapes which, in some faces of type, lead him to forget the sense of words and to study the notions of the designer.

NIAGARA

From the Keystone Type Foundry

**MIRABEAU'S EXHORTATION:
BE BOLD! BE BOLD! BE BOLD!
But not Overbold.**

WHITE
SPACE
BETWEEN
LINES.

A full page of roman type set in solid lower-case does not attract the hasty reader. It has no salient feature. Its lines are of the same length and each line repeats familiar letters that

WHITE
SPACE
BETWEEN
WORDS.

have no charm of novelty. If the page has one or more paragraphs, the reader's eye instantly seeks the white space at the beginning or ending of the paragraph as a welcome break to monotony. The method of occasionally alternating the lines of black print with a little of plain white is

WHITE
MARGINS
ABOUT
PAGES.

approved by all readers. It gives distinction and ease in reference to verses of the Bible, to lines of poetry, to entries in a dictionary, etc.

WHITE
SPACE
BETWEEN
CHAPTERS.

THIS IS RUSKIN'S REMARK:

The eye is not saddened by

A QUANTITY OF WHITE

*But it is saddened and should be greatly
offended by a QUANTITY OF BLACK.*

HAIR-LINE GOTHIC ITALIC

From the Boston Type Foundry

IN NOTE AND LETTER HEADINGS OR CIRCULARS

the names of Officers, Directors, and Leading Officials are sometimes required to be set close in very small type. It may seem more becoming, when these names are set in an Inclined letter, to mate them in inclination with the Script that has been selected for the text or for a large line of display.

This Gothic Italic is a favorite for this purpose

Capitals 8 $\frac{3}{4}$

6-point, old body

Lower-case 6 $\frac{1}{2}$

NO STYLE OF TYPE IS MORE READABLE

than a clean-cut Roman Lower-case, but to many Buyers of Printing, Roman is too plain and lacks distinction. The Free Graces of Engraved Lettering are preferred, and this Hair-line Gothic is one of the substitutes made to please that demand.

It is indistinct enough to please the taste that prefers feeble expression

Capitals 10 $\frac{1}{2}$

8-point, old body

LAW ITALIC

The Italic usually sold as the Mate of Roman Type is a Condensed Letter that may be, and often is, much disliked in all its smaller sizes when it has been selected and set for

LEGAL OR MERCANTILE PRINTING

This Law Italic was purposely made with a Broader and More Readable Face to meet the need for a Plain Type ¶ Of this we have Three Job Cases with Ordinary Accents.

Capitals 10¹/₂

8-point, old body. Farmer

Lower-case 12¹/₂

It was soon found that the Broadening of the Lower-case Series of Law Italic called for Wider Spacing between Words and also between Lines. It is not pleasing when set solid.

TO MAKE SURE OF THE USE OF A LEAD

the Brevier Face here shown was cast on the Long-primer body to give this needed legibility. ¶ Of this font we have one pair of cases with the Ordinary Accents for French and Spanish.

Capitals 16¹/₄

8-point on old 10-point body. Farmer

Lower-case 11¹/₄

A Larger Face of this Law Italic on Long-primer body has been much liked for

BANKERS' AND MERCHANTS' LETTERS

It is as plain as Roman and is preferred by many to Roman. To some buyers it is more acceptable than ordinary Scripts

GOTHICS

A FULL ALPHABET OF LOWER-CASE

and Figures are furnished with this font of Pearl Gothic. This face has been found a useful substitute for ordinary italic in the composition of matter in which it is necessary to crowd a deal of matter in small space as in indexes, advertisements and the descriptions of annotated illustrations, and yet give to print modified display. Note that it has two nicks. Of this font we have Two Job Cases. Do not mix with the three-nicked type of same foundry, which is a trifle smaller in face and has no lower-case.

Capitals 10 $\frac{1}{2}$ 5-point, old body, 2 nicks, Conner Lower-case 7

THIS FACE OF PEARL GOTHIC, CAPITALS ONLY, HAS THREE NICKS ON THE BODY. IT IS FROM THE OLD CONNER FOUNDRY. DO NOT MIX ITS CAPITALS WITH THE PEARL GOTHIC OF TWO NICKS, WHICH HAS A SERIES OF LOWER-CASE, AND IS OF A LARGER FACE.

Capitals 9 Conner 5-point, old body

THIS VERY BOLD FACE OF PEARL GOTHIC

from the Farmer Foundry has lower-case and figures, and Regular Accents for French. Of this font we have one and a half cases and an Accent Case. It mates well with Farmer Gothic, Nos. 2 and 3.

Capitals 11 $\frac{3}{4}$ 5-point, old body Lower-case 8 $\frac{3}{4}$

The word Gothic is used by many persons as a proper synonym for what is rude or coarse, unfinished or disagreeable. The name was given with propriety many centuries ago to the work of the barbarians who devastated the south of Europe, but now the word has a new application. Gothic defines the most finished forms of church architecture in which "stone is made to look like lace" as well as to medieval manuscripts in which the general somberness of the letter is redeemed by profuse ornamentation with gold and bright color. In England Gothic type is called Grottesque or Sans-serif.

Gothics and Runics

GOTHIC

SIX-POINT GOTHIC NO. 7

also from Farmer Foundry, is apparently of the same face as the Pearl Gothic of two-nicks of that foundry. But it is on the 6-point body and can be used, although it does not line with all faces of nonpareil or 6-point roman. Its capitals may be used to advantage in catch lines; its lower-case in the minor legend lines under small illustrations.

LIGHT-FACE GOTHIC No. 201

THE LIGHT-FACE GOTHIC No. 201 OF THE BRUCE FOUNDRY has for each size a complete series of lower-case sorts and figures. The figures are modeled on the old-style forms of uneven height and not on line with the capitals. This size, on nonpareil body, is in two cases, and it has lower-case sorts and accents.

Capitals 10 Lower-case 7
6-point, old body. Bruce

THE SIZES FROM SIX- TO TWELVE-POINT of this No. 201 style are of most service in the more dainty and delicate forms of Job printing. Not so pleasing in Advertisements and Book Work.

Capitals 11 $\frac{3}{4}$ Lower-case 8 $\frac{3}{4}$
8-point, old body. Bruce

IT LINES NEATLY WITH SOME ROMANS

But it is not emphatic and makes but a feeble display with Roman.
This size also has some French accents

Capitals 14 $\frac{1}{4}$ 10-point, old body. Bruce Lower-case 10

THIS VARIATION OF THE NEW GOTHIC FACE

From the Farmer Foundry, is on Small-pica body and on a narrower set. It has Two Sets of Figures—1 2 3 4 5 Regular and 6 8 9 0 Inferior

Capitals 13 $\frac{1}{4}$ 11-point, old body, No. 7. Farmer Lower-case 9

THIS SIZE HAS FIRMER LINES

But it must be classed as a Gothic of very Light Face.
Of this font we have two cases

Capitals 20 12-point, old body. Bruce Lower-case 11 $\frac{3}{4}$

ITS CAPITALS NEED SPACES

Between all letters too closely fitted

Capitals 28 18-point, old body. Bruce Lower-case 19

The bold Gothic fashion of letter appears to best advantage when it is represented on a large body.

**A PARAGRAPH
in Gothic is not
very comely, but
it is easily read.**

Small letters, like the a e s, with crossing lines in center are not clear.

MEETING LETTERS
with tall lines need Uneven Spacing.
Even Spacing produces Unsightly Gaps.

CAPITALS ONLY
or lower-case only
BECOME MONOTONOUS

A SERIES OF LINING GOTHICS
is of service in displayed work.

GOTHIC OF SMALL SIZE OFTEN USED
for legend lines under illustrations.

Gothic needs much Relief of White.

The very thick line upon any body of small size fills up too much of a face.

The De Vinne Press has many other faces of this approved character.

Dense lines produce too little white, much black.

Types of the De Vinne Press

BOLD FACE GOTHIC

THIS FACE OF GOTHIC

Is the practical extreme of boldness. A thicker stroke would make the capitals, figures and lower-case blacker but more indistinct. Of this font we have two cases; one with accents

Capitals 14³/₄ 6-point No. 3, old body. Farmer Lower-case 11

A THICK FACE APPROVED BY ADVERTISERS

Which will take a Generous Supply of Ink. Of this font we have Two Job Cases and some Accents

Capitals 18 8-point No. 2, old body. Farmer Lower-case 13

GOOD FOR FAILING EYESIGHT

Easily Readable without strong Glasses. Of this font we have One Pair of Cases and One Job Case with a few Accents

BACKSLOPE LINING GOTHIC

Has figures, but no lower-case

THE 4 FACES OF THIS BACKSLOPE LINING GOTHIC DIFFER IN SIZE AND HEIGHT BUT ALL ARE ON THE BODY NONPAREIL, EACH FACE CAST TO LINE NEATLY WITH THE OTHER FACES IN SERIES IN ANY COMBINATION. DON'T MIX IN HASTE. LOOK AFTER THE NICK IN COMPOSITION. THIS SERIES HAS NO LOWER-CASE; BUT IT DOES HAVE PROPER FIGURES FOR EVERY SIZE

No. 5

BACKSLOPE CAN BE USED PROPERLY IN A LIST OF NAMES OF PERSONS OR OF PLACES IN NARROW COLUMNS PLACED BY THE SIDE OF A PAGE THE THICKNESS OF THE TYPES VARIES IN EVERY SERIES FROM 7 TO 11³/₄ EMS PICA, AND THIS VARIATION IN WIDTH IS AN AID TO EVEN SPACING AND TRUE JUSTIFICATION.

No. 7

DO NOT USE THIS SERIES OF BACKSLOPE TYPES WITH THE REGULAR ITALIC OR SLANTED SCRIPT. THE CONTRAST OF THE STRONG BACKWARD SLANTS OF ONE WITH FORWARD SLANTS OF OTHER IS FORCIBLE AND NOT AGREEABLE. THESE BACKSLOPES ARE NOT TOTALLY ACCEPTABLE WITH THE ROMAN TYPES THAT HAVE STEMS OF UPRIGHT LINES

No. 6

OUR LIMITED COLLECTION OF SMALL GOTHIC FACES COMES FROM MANY FOUNDRIES AND THEY NEED A DEAL OF CARE TO PREVENT CONFUSION. BUYERS OF PRINTED MATTER WHO LIKE DAINTINESS AND DESIRE AN IMITATION OF THE LETTERING STYLE OF ENGRAVERS ON COPPER, PREFER THIS SERIES FROM THE AMERICAN TYPE FOUNDERS COMPANY, IN WHICH THIRTEEN DISTINCT FACES ARE CAST ON NONPAREIL BODY. THE FACES ARE NOT STRICTLY HARMONIOUS IN THICKNESS OF LINE BUT THEY SHOW CORRELATION AND CAN BE USED TOGETHER.

No. 8

These faces are on 6-point body and are made to line.

For an inclined Gothic with the regular Italic slant see pages 309-310. There are three series, and each one has lower-case sorts.

Types of the De Vinne Press

GOTHIC CONDENSED No. 240

Bruce

This series consists of nine sizes ranging from 6- to 48-point.

The absence of serifs permits the gothic character to be huddled until it is hard to read, but the style is much favored by advertisers for it enables many letters to go in one line.

All the sizes in this series have figures and lower-case sorts.

All shapes of gothic may need occasional letter spacing for capitals, which can be a hair space in the smaller and a 5-to-em space in the larger sizes.

It also needs generous leading. A condensed gothic of firm face, unled and filling the body, makes composition hard to read.

TO THE ADVERTISERS WHO DESIRE PLAINNESS AND SIMPLICITY

no form of type seems to promise better service than that which American type foundry have labeled Gothic. It has no serifs. As a rule, all its strokes are of same width, and no stroke is without a definite legible purpose. The eye is not confused by hair-lines that carry with them no meaning.

Capitals 9

6-point, old body

Lower-case 6 $\frac{3}{4}$

FOR A SINGLE LINE OF DISPLAY IN CAPITALS OR LOWER-CASE, Gothic fully meets the advertiser's need, when it has been selected for a proper size of width and stem, but it calls for discretion in spacing and leading.

Capitals 11

8-point, old body

Lower-case 8 $\frac{1}{4}$

NO CHARACTER IS MORE DISAPPOINTING when it has been composed for a solid paragraph of many lines. Composition in unled Gothic type always presents a crude, scraggy and huddled appearance.

Capitals 14

10-point, old body

Lower-case 10

A LONG PARAGRAPH SET UP SOLID entirely in Gothic of firm face is not so readable as the same matter would be if set in roman of lighter face.

Capitals 17 $\frac{1}{4}$

12-point, old body

ECENTRICITIES

A LINE OF TYPE can be bent in the form of a circle, to any arc of a circle, in serpentine curve, or it can be twisted upward or downward at any inclination. All these experiments in what properly may be called

TYPOGRAPHICAL GYMNASTICS

are attempts to force squarely constructed types in curved or angled positions for which they were never designed, and into which they can be unmechanically fitted only at

A Serious Waste of Time

The unavoidable increase of expense in a composition of this character is usually greater than was estimated, and many times more than that of plain work. After an inspection of composition so constructed these questions of doubt may arise:

IS ANY FORM OF ECCENTRIC COMPOSITION WORTH ITS EXTRA COST?

An advertisement is written to be read and remembered, but which one of its features makes most lasting impression on the reader: the ingenuity of the compositor? or the words and the plain

INTENTION OF THE ADVERTISER?

THE RONALDSON GOTHIC TYPE

RAISED LETTERS FOR THE BLIND of Gothic form, read by the sense of touch.

TYPES OF METAL
cast upon square and solid bodies are not constructed for flattening or compression, or even to be curved to the arc of a circle. Types set up to form words are equally inflexible. There are few words that can be contracted wisely. To shorten words, as was done by the early copyists, is now rated as an exhibit of carelessness or ignorance.

Many advertisers prefer
**GOTHIC
TYPE**
as the most readable
form of letter.

GOOD TASTE
orders that words shall be printed in full, and that they shall be divided at ends of lines on syllables only. It is to keep together the syllables, and to prevent the division of words, that condensed types are kept in use.

THE REMOVAL OF SERIFS enables letters of a Gothic shape to be moderately compressed without much loss of legibility, but the extra-condensed and hair-line Gothics give a strain to weak eyes. Use them only when ordered.

HAIR-LINE GOTHICS and all weak characters are admirable exhibits of the skill of the designer, but they are torment to all who need and do not make use of strong glasses.

LINING SCHOEFFER is an acceptable type for a heading in a compacted advertisement, or for a paragraph of many words. The broader form of Gothic is more pleasing when it can be surrounded by plenty of white space.

LOWER-CASE SORTS OF THIS SIZE

Are largely used for side headings in Catalogues set in 10-point old-style. It has many accents

Capitals 17¹/₂ 10-point, old body Lower-case 11³/₄

A study of the proper construction of the old-style character, as it was made by Dürer, Tory, Van Dyck, and Caslon will show that the intent of the style is the production of a general effect of extreme lightness and clearness. Blackness and solidity are carefully avoided. Contriving a bolder face of letter on this model is consequently a task of some difficulties. Types so made must preserve a good degree of openness within as well as without the letter; but it must also have more of boldness in all its lines of construction

without impairing the ruggedness and angularity that are prominent features of old-style. The designer of this series has fairly accomplished this task. The round letters are not high and are nearer the center of the body. There is no undue shortening of the descending letters. There is a fair relief of white space in and around all the characters in all the eleven sizes on metal body. All the smaller sizes have accents. It is a useful substitute for italic in the display of emphatic words in the text, for it lines truly with the most approved cuts of Old-Style Roman, but is not vulgarly ostentatious in this emphasis. åääëèîöüçç

ANTIQUÉ (IONIC)

Farmer

THE type now called Antique in America, introduced in England for the first time about 1815, was excessively broad and bold. Savage, who wrote soon after on *Decorative Printing*, said that the designer aimed at the broadest possible surface so that it could be covered with ink even to the belittling or obscurity of interior relieving white space. Types so made were of doubtful value even in poster job work; they were rigorously excluded from book work and many varieties of fine job printing. This Ionic which came thirty years later seems to have been the most successful attempt to combine a reasonable degree of boldness with a proper relief of white space.

JENSON

From the American Type Founders Company

JENSON IS THE AMERICAN REPRODUCTION

Of the style made by William Morris of the Kelmscott Press, and by him called the Golden Type. He says that he took for his model the Roman letter made by Nicholas Jenson in the Fifteenth Century. It first appeared in 1891, in "The Story of the Glittering Plain." Bibliophiles welcomed the Golden Type as a pleasing return to the simplicity of the early printers, and as a vindication of the superior merit of Old-fashioned Masculine Printing.

Of this we have four cases.

Capitals 13¹/₄

8-point

Lower-case 8¹/₂

THE JENSON TYPE HERE MADE

Fairly follows the general form and peculiarities of the Golden Type, but it is a trifle bolder and blacker. It is seldom used now as the text type of a new book, for the ordinary reader does not relish it as a type of text. The Jenson type has been selected by amateur printers for reprints of old books, but its too frequent employment on trivial or ephemeral books has disgusted the bibliophile who might have admired the new face if it had been used mainly for standard books. Familiarity has bred dislike

Of this 10-point we have four cases.

Capitals 16

10-point

Lower-case 10³/₄

JENSON IS LARGELY USED

For subheadings in newspapers, for advertisements, and in job work. It has the clearness of the best cuts of Old Style with the boldness and durability of an Antique

CUSHING OLD-STYLE

Central

AN ANTIQUE MAY BE FOUND TOO WIDE FOR SPECIAL USES

One of the objections to Old-style Antique of customary shape is the width of its characters. They take up too much space in a sub- or a side-heading and seem needlessly prominent when moderate display is desired.

To prevent a useless sprawling of type over paper this Cushing Old-style was devised. It retains Old-style features in a compressed form, yet it is sufficiently bold and clear for ordinary headings. It does not line with ordinary romans.

Capitals 10

LATIN CONDENSED

Farmer

THIS SERIES OF EIGHT SIZES OF LATIN CONDENSED

seems the most successful attempt at a pleasing union of the boldness of the Antique Style of type with the symmetry of the ordinary Roman letter in condensed shape. It has more of grace than the older forms of Condensed antique, but it is not any more readable. The type-founder who made this face may have called it Latin Condensed because it was an imitation of that feature of the extremely condensed letters of scribes of Lombardy who compressed letters to indistinctness

ONCE A MAN WAS JUDGED BY SURROUNDINGS OF HIS SELECTION

His Dress, Habits, Associates and Books were indications of his Social Status; his Shop, Store or Office showed his sense of Neatness or Propriety; the Dress and Manners of his Clerks or Assistants, and his printed Cards, Circulars or Advertisements, his notions of Propriety or Good Taste

Capitals 10¹/₃

6-point

Lower-case 8²/₃

HIS PRINTED WORK WAS HIS TRAVELING SALESMAN

It showed to the Public his liking for Appropriate Type, Proper Paper and Neat Presswork, or his Indifference to these niceties. At a glance the desired buyer formed an opinion of the Care or Carelessness of the Advertiser in the management of his business

Capitals 12¹/₃

8-point

Lower-case 10¹/₃

UNCOUTH TYPES CARELESSLY COMPOSED

In defiance of established usage indicate a desire to disregard old rules of order and good proportion, with an intent to coerce the buyer's attention by an ostentatious display of new notions in printing

Capitals 15¹/₃

10-point

Lower-case 12¹/₂

LETTERS WIDELY DISLOCATED

HALM

Six sizes with lower-case and figures

GEORGE F. HALM,

A designer of remarkable ability was induced by the De Vinne Press to devise this erratic style to please buyers of printing who were tiring of cruder novelties then in fashion. Design began with intent to imitate one mannerism of Oriental lettering as in Sanscrit and Hebrew, by making the alignment of the letters at the top and not at the foot of each character

Capitals 14 $\frac{1}{2}$

8-point, old body

Lower-case 8 $\frac{3}{4}$

BETWEEN THE YEARS 1885-95

Halm found favor as a pleasing novelty in the composition of Cards, Circulars, Letter Headings and small jobs

Ach, aus dieses Thales Gründen,
Die der kalte Rebel drückt,
Könnst' ich doch den Ausgang finden
Ach, wie süß! ich mich beglückt!
Dort erblüht' ich schöne Hügel,
Ewig jung und ewig grün;
Hätt' ich Schwingen, hätt' ich Flügel,
Nach den Hügeln jög' ich hin.

Harmonien hör' ich klingen,
Töne süßer Himmelsruh,
Und die leichten Winde bringen
Mir der Düste Balsam zu.
Gold'ne Früchte seh' ich glühen,
Winkend zwischen dunklem Laub,
Und die Blumen, die dort blühen,
Werden keines Winters Raub.

Raß dich, Geliebte, nicht reu'n, daß du mir so schnell dich ergeben!
Glaub' es, ich denke nicht frech, denke nicht niedrig von dir.
Vielsach wirken die Pfeile des Amor: einige ritzen,
Und vom schleichenden Gift kranket auf Jahre das Herz.
Aber mächtig besiedert, mit frisch geschliffener Schärfe,
Dringen die andern ins Mark, zünden behende das Blut.
In der heroischen Zeit, da Götter und Göttinnen liebten,
Folgte Begierde dem Blick, folgte Genuß der Begier.
Glaubst du, es habe sich lange die Göttin der Liebe besonnen,
Als im Idäischen Hain einst ihr Anchises gesel?
Hätte Luna gesäumt, den schönen Schläfer zu küssen,
O, so hätt' ihn geschwind neidend Aurora geweckt.
Hero erblickte Leandern am lauten Fest, und behende
Stürzte der Liebende sich heiß in die nächtliche Fluth.
Nyca Sylvia wandelt, die fürstliche Jungfrau, der Liber
Wasser zu schöpfen, hinab, und sie ergreift der Gott.
So erzeugte die Söhne sich Mars! — Die Zwillinge tränket
Eine Wölfin, und Rom nennt sich die Fürstin der Welt.

This "Cursive François," or "Civilité" as then called, was designed by Nicholas Granjon in imitation of a style of penmanship then in fashion, and cast at a type foundry of Lyons in 1556. It was used by Plantin, of Antwerp, for several books.

Use it now, only on request, for short quotations from French authors of the Sixteenth or Seventeenth Century. The font is small, and was cast as a favor to us from the original matrices in a type foundry at Lyons.

Scripts

1870

SCRIPT

TYPE-SCRIPT is seldom required by the customers of this printing-house. The old styles with long projecting kerns and stiff curves are now disliked. The sweep required for each ascending and descending character makes the small round letters, like a, o, and m, relatively indistinct. The stiff formality or the awkward flourishes of the capital letters of the old fashions are other objections. The feebleness of hair-lines and the liability of all characters to show wear in breaks or gaps between characters make type-script an ungraceful letter for the buyer of printing and an unprofitable one to the master printer. Typographic script on an inclined body is a vain attempt to overcome mechanical difficulties; it is a mistake.

Script lettering may be needed in the printed forms that have to be produced in haste for receptions, weddings, and other assemblies. It may be required for visiting and professional cards, but not often for a business or professional circular. Plain type usually has preference, but when script is used, the taste of the time is for the more flowing forms of script made by lithographers and copperplate-printers, who can easily give to all characters graces that are impossible in types cast on a square body.

Never use type-script on inclined body for any form of open composition that requires display lines to full width of measure with occasional catch-lines between. The unavoidable length of the ascending and descending letters, that will not interlock as they readily do in engraved work, gives to every attempt at display in type-script an unpleasant suggestion of scragginess.

Never select type-script to be set in a paragraph in the ordinary letter-writer style, with lines of the full width of measure, unless that paragraph has few words and the margins about the paragraph are ample. The broad blank spaces that are produced between lines by ascenders and descenders must be relieved by abundance of white space in the margin. A composition of script that seems huddled and confused on paper of note size is not so objectionable when it is printed on the larger page of letter.

Do not indent the first line of a paragraph about one third or one half the width of the measure. An indentation of two or three ems is enough. Do not wide-space words of script.

Script Types of the De Vinne Press

FRENCH SCRIPT

LOUIS XIV

From the Foundry of Gustave Mayeur, Paris

Combines Clearness & Quaintness with its Unpretentiousness

French body 24

Lower-case 20½

It is a Proper Mate for the Old Style Roman Type of any Fashion

French body 20

Lower-case 16½

Its Lower-case is a Happy Combination of Good Features in Italic and Script. Few Kerned Letters. Letters do Not Connect. Has Slight Inclination. No loops to Long Letters. Has Accents for Small Letters

French body 16

Lower-case 14

It is Frequently Selected for Note and Letter Circulars by those who dislike the Monotony of Roman Lower-case Letters and the Overworked Refinements of Imitations of Copperplate Script.

French body 12

Lower-case 11

This Smallest Size of Twelve-points may be too small for service in the ordinary Note Circular, but it can be used effectively for Names of Persons in the Headings of Letters and Circulars, for which purpose it is as distinct as small Gothic or the small capitals of Roman.

French body 10

Lower-case 8½

These are some of the accents and figures :

RUNDSCHRIFT

From the American Type Founders Co.

This Vertical Script is shown in Four Sizes:

Pica or 12-point

Great-primer or 18-point

Double small-pica or 22-point

Double English or 28-point

28-point, old body

Lower-case 18³/₄

Of German Design, it consequently shows German Peculiarities in Eccentric Capital Letters. Its Lower-case seems small, but it is Distinct and More Readable than other styles of a much Larger Face.

22-point, old body

Lower-case 12

It is seldom called for as a Suitable Type for Note and Letter Circulars, but it may be selected with advantage for Mottos and Short Extracts in Pamphlets in places where the Ordinary Forms of Italic seem deficient in proper Distinctiveness or Emphasis.

18-point, old body

Lower-case 10

Its Arabic Figures, 1 2 3 4 5 6 7 8 9 0, are large and plain, and may be used for other fonts of Vertical Letter in which figures are needlessly indistinct. Its Eccentric Capitals will be found serviceable in the connecting word of the First Line of Paragraphs of light-faced Black-letter when they are preceded by Large and Ornamented Initials.

12-point, old body

Lower-case 8¹/₂

Script Types of the De Vinne Press

PEN TEXT

Another Style of
vertical script.

40-point, old body

Lower-case 38

We have Five sizes:

English or 14-point

Great-primer or 18-point

Dbl. small-pica or 22-pt.

Dbl. English or 28-point

Dbl. paragon or 40-point

28-point, old body

Lower-case 29

Pen Text, not unlike Rundschrift
in form, is Broader, Bolder, and
more Angular.

22-point, old body

Lower-case 21

Do not use the Flourished Capitals without
Order; they are disliked by most customers.

18-point, old body

Lower-case 16½

The Lower-case can be used for Emphasizing
important words in Script Text of Lighter Face.
It is also useful in capital form for First Lines of
Paragraphs preceded by a Large Initial Letter.

14-point, old body

Lower-case 14½

Script Types of the De Vinne Press

ENGROSSING

Bruce

A thin and angular Vertical Script with Eccentric Capitals

We have Five Sizes: Pica or 12-point
Great-primer or 18-point

Double pica or 24-point

Double great-primer or 36-point

Canon or 48-point

24-point, old body

Lower-case 14¹/₄

The Larger Sizes of the Capital
Letters of this Style are Simpler
and More Readable than those
of the Kundschrift, but are Gro-
tesque in separate lines of Display

36-point, old body

Lower-case 20

Capitals can be used with the Lower-case to good advantage as the Headings over Display Lines in other and Lighter Faces of a fanciful Text-Type.

18-point, old body

Lower-case 10¹/₂

The Lower-case (with capitals) of the Larger Sizes will be found an Effective Letter for Paragraphs in Circulars that seem to require prominence without producing an appearance of the Boldness and Blackness made by Large Coarse Types. The Smaller Sizes are neglected styles that could be of good service.

12-point, old body

Lower-case 7³/₄

ENGROSSING

Bruce

For Notices or Circulars of Few Words, intended to be Quaint, but Attractive and Readable, and not Ostentatious with a Bold and Black Lettering, this Face on Canon body is especially suitable.

Script Types of the De Vinne Press

MANUSCRIPT

From the American Type Founders Co.

Manuscript here shown in Four Sizes of Face upon Two Bodies: Two on Great-primer or 18-point, and two on Double-pica or 24-point.

24-point, old body, No. 2

Lower-case 25

This imitation of Penmanship has a Freedom that is seldom found in ordinary Forms of Inclined Script on a Square Body.

24-point, old body, No. 1

Lower-case 21½

This form of Manuscript continues to be preferred for the Ease of its Style in the printing of Informal Notes and Invitations on paper of small size.

18-point, old body, No. 2

Lower-case 17

The Monotony and relative Indistinctness of the Smallest Face can be relieved and aided by the occasional use of the Larger Face, which Lines with its Mated Size on the Same Body. *Italic Engraver's Open* can be used to Display Important Words that need Special Prominence.
